Dear George

## **123 Westbury Rd Tree Removal Development Application**

The purpose of this letter is to provide supporting information and an assessment against the relevant Planning Scheme provisions for the removal of 95 trees at the Mt Pleasant property, 124 Westbury Road.

### **1 Background**

The poor condition of the trees on this property has been of concern to the property owner for some time. It was originally planned to seek their removal at the time of subdivision but given this is now some time away, it is considered imperative that the trees be removed in a safe manner before they fail during high wind events and cause damage or harm to any persons.

This application is accompanied by three supporting assessments:

- Arborimage Arboricultural Report
- GHD Flora and Fauna Assessment
- North Barker Flora and Fauna Assessment Review

### **2 Applicant**

The applicant is GHD Pty Ltd obo Kreglinger Australia Pty Ltd.

The appropriate contacts are:

<b>Chloe Lyne, Senior Planner – GHD</b>	<b>Rob Harrison – Kreglinger Australia</b>
T: 03 6332 5525 E: <a href="mailto:chloe.lyne@ghd.com">chloe.lyne@ghd.com</a> Level 2, 102 Cameron Street, Launceston, TAS 7250 PO Box 1269, Launceston, TAS 7250	T: 03 632 6400 E: <a href="mailto:Robert@harrisonhumphreys.com.au">Robert@harrisonhumphreys.com.au</a> 48 Brisbane Street, Launceston, TAS 7250

### **3 Subject Site**

The subject land is situated at 123 Westbury Rd, adjacent to the title containing the historic Mt Pleasant homestead. This site comprises a 3.8 ha lot with 140 metre frontage to Westbury Road (refer Figure 1). The site has a north to northeast aspect and is moderately sloping towards Westbury Road. There are views from the site to the north over the City and Tamar River and to the east to Mt Barrow and surrounding ranges.

The site contains a single dwelling on the south west corner of the site, with the balance of land comprising cleared pasture, eucalypts and pines (see Flora Fauna Assessment attached to this correspondence).

The site essentially comprises a large undeveloped lot located in between two residential areas and the Mount Pleasant historic site. Specifically the following properties adjoin the site:

- South: 4 residential properties (4, 6 and 7 Treviso Court and 28 Eurella Street) and Mount Pleasant historic homestead and vineyard (9 Luxmore Place).
- West: 11 residential properties (1-21 Caroline Street and 125 Westbury Road).
- East: 4 residential properties (105 and 99 Normanstone Road, 20 and 24 Eurella Street).

The adjoining Mount Pleasant property is a heritage listed site under Schedule 2 of the Launceston Planning Scheme 1996. The listing includes house, outbuildings, entrance gates and lodge – Victorian.

Figure 1 Aerial Location Plan (*Source The LIST*)

#### 4 Proposed Tree Removal

It is proposed to remove a total of 95 trees from the property. This is due to the fact that these trees are in poor condition and pose a significant risk to property users. It is the property owner's intention to remove these trees and therefore mitigate the risk prior to any major injury or death occurring.

The majority (76) of the trees to be removed are Radiata Pine trees, a non-native, weed species.

All the trees on the site have been reviewed by a qualified arboriculturalist and assessed for their condition. All trees recommended for removal are being sought to be removed. A full copy of the report is attached to this letter. A summary of the tree to be removed is provided in the table below.

Table 1 Summary of Arboricultural Assessment

Number (refer to Arborists Report)	Species	Condition	Recommendation
1 x 76 trees	<i>Pinus Radiata</i>	Known weed species, saplings spreading uncontrollably, most trees have numerous hazards present and are generally considered senescent and immediately dangerous to persons or property coming close to their vicinity	Remove all trees of this species for site.
3	<i>Allocasuarina (She oak)</i>	Failed branches throughout, weak branch unions	Remove tree.
6	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Tree in significant decline, numerous past failed branches. Evident decay in base. Crown dieback	Remove tree.
10	<i>Eucalyptus viminalis (White Gum)</i>	High impact zone with residential property nearby. Decline in upper canopy, evident borer damage. Swelling/decay in major branches	Significant habitat tree. Crown reduction to remove major hazards and improve stability. Removal of dead/decayed branches or remove tree.
14 x 5 trees	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	5 trees in a row from north to south, 3 x larger trees more significant in health and structure, major deadwood mainly in the lower canopies, some evidence of borer	Possible to retain trees with hazard reduction works although long term hazards envisioned if site becomes residential.
15 x 3 trees	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Major failed branches and trunks, heavy lateral branches. Imminent future failure.	Remove trees.
18	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Bifurcated trunk at ground has failed, half tree is dead. Other half is leaning into canopy of neighbouring tree.	Remove tree.
21	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Heavy lean to north, some decay in lower trunk	Remove tree.
23	<i>Quercus Palustris (Pin Oak)</i>	Crowded growing position for eventual size. Mishapen canopy spread	Remove tree.
24	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Crowded growing conditions	Remove tree.
25	<i>Cupressus species (Cypress)</i>	Crowded growing conditions for eventual size	Remove tree.
27	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Bifurcated trunk with one side completely dead, extensive decay in main trunk.	Remove tree.
28	<i>Eucalyptus amygdalina (Black Peppermint Gum)</i>	Decay at base and at 1.5m of trunk	Remove tree.
55	<i>Liquidamber styraciflua (Liquidamber)</i>	Crowded growing conditions for eventual size.	Possible removal to allow other trees to benefit.

## 5 Planning Scheme Assessment

### 5.1 Planning Instrument

The application relates to Launceston Interim Planning Scheme 2015 ('Interim Planning Scheme'). The Planning Authority is the Launceston City Council. The sections below provide an assessment against the relevant planning scheme provisions.

### 5.2 Low Density Residential Zone Controls

The subject site is zoned Low Density Residential under the Interim Planning Scheme. It is also impacted by the Scenic Management Code and the Biodiversity Code with Overlay Areas identified as per Figure 2 below.

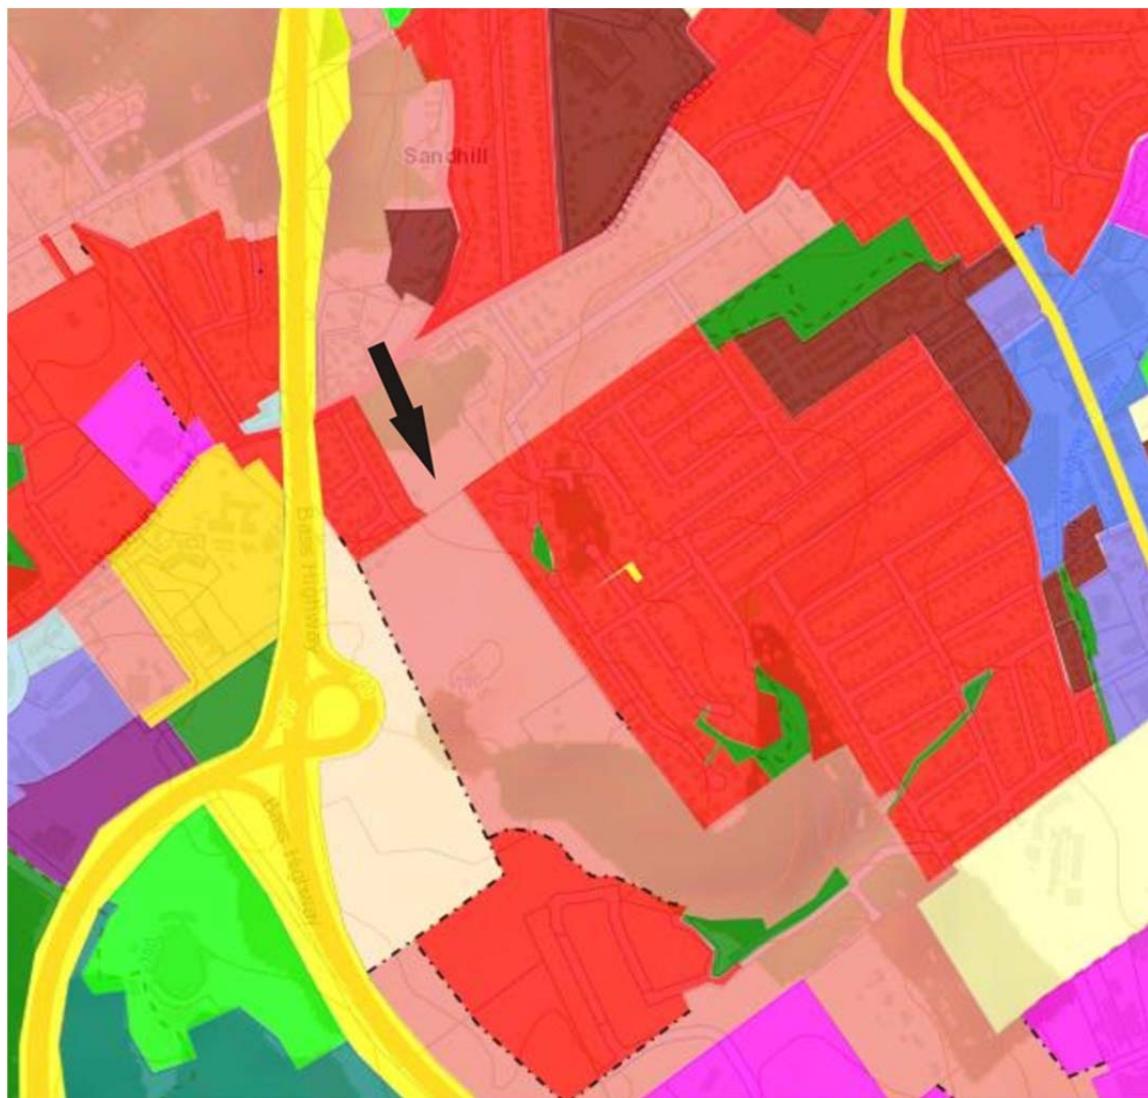

Figure 2 Interim Planning Scheme Zoning Map

Figure 3 Interim Planning Scheme Overlay Map

## 5.3 Permit Status

Discretion is evoked in relation to the removal of the vegetation due to the fact the site is identified in the Scenic Management Overlay and is identified as having Priority Habitat. The specific discretions relate to the following clauses:

- Clause 7.6.2 Local Scenic Management Areas, P3
- Clause 8.6.1 Habitat Vegetation Management Areas, P1

## 5.4 Planning Assessment

### 5.4.1 Scenic Management Code

#### E7.1 Purpose of the Code

*E7.1.1 The purpose of this provision is to:*

- a) ensure that siting and design of development protects and complements the visual amenity of defined tourist road corridors;
- b) ensure that siting and design of development in designated scenic management areas is unobtrusive and complements the visual amenity of the locality and landscape; and
- c) ensure that vegetation is managed for its contribution to the scenic landscape.

#### E7.6.2 Scenic Management Areas

<b>Objective</b>	
<i>The siting and design of development is to be unobtrusive in the landscape and complement the character of the scenic management areas</i>	
<b>Acceptable Solutions</b>	<b>Performance Criteria</b>
<b>A2</b> <i>No vegetation is to be removed</i>	<b>P2</b> <i>Development that only involves the clearance or removal of vegetation must have regard to:</i> <ol style="list-style-type: none"> <li>a) the scenic management precinct existing character statement and management objectives in Clause 7.6.3;</li> <li>b) the physical characteristics of the site;</li> <li>c) the location of existing buildings;</li> <li>d) the type and condition of the existing vegetation;</li> <li>e) any proposed revegetation; and</li> <li>f) the options for management of the vegetation.</li> </ol>

#### Assessment:

The proposed tree removal is not to facilitate any building works, it is simply to remove trees that have been deemed unsafe and are a hazard. An arboriculturalist has undertaken an assessment of the condition of all of the trees on the property and has recommended removal of the 94 subject to this proposal. Of those 76 are radiata pines a weed species that are largely at the end of their life and in very poor condition. Therefore the removal of the exotic and four native trees is unavoidable and required for public safety. Management of the trees through pruning is not a viable option.

Assessment against each of the criteria under P2 is provided below:

- (a) An assessment of the proposed tree removal against the character and precinct objectives is provided in the table below.
- (b) The removal of the pine trees in particular will alter the physical characteristics of the site. However, all trees proposed for removal are in poor condition and have been recommended for removal by a qualified arboriculturalist. The skyline will be altered following the removal of the trees but it is submitted that the view will actually be enhanced. The pine trees particularly are in poor condition with falling limbs and are not visually appealing. The removal of these trees will open up the view to the well-established native trees at the rear of the site, the line of which along the ridge will largely remain with only the removal of trees numbered 14 having any real impact on the native tree skyline. Further the trees will open up the vista to the established vineyards and historic Mount Pleasant homestead which is considered to be a more aesthetically pleasing vista than of degraded pine species.
- (c) There are no buildings located within proximity of the trees to be removed with the exception of buildings on the lots adjacent to trees 6 and 10.
- (d) The attached arboricultural report clearly demonstrates that all trees subject to this application are in poor condition and their retention is not viable. Please refer to Table 1 for details of the assessment of the condition of each tree proposed to be removed. The arboricultural report in discussing the Radiata Pine trees states:

*'The Northern end of the site closest to Westbury Road consists mainly of large Radiata Pine trees, of which there are approximately 76 trees considered to be semi mature to mature of age; there are numerous saplings of this species in the understory as well.'*

*This species of tree is a known weed and is a very invasive tree for the ability to spread seed and grow in almost any site condition, while also raising acidity levels in soils and preventing the growth of natural endemic species.*

*The majority of the large Radiata pines on this site are considered to be of a mature age for an urban situation and almost all of this species of tree on the Mount Peasant site are considered to be in poor overall condition. They also present numerous hazards to persons and property coming close to their vicinity. Long term management of hazards in these trees is not recommended unless necessary and there should be no argument to having all of this species of tree removed from the site to prevent further spread into the surrounding areas of urban environment and allow for site rejuvenation for future development of the landscape.'*

- (e) Given it is the property owner's intention to subdivide this property in the near future (recognising that subdivision can already occur at a low density) it would be unwise to undertake replacement plantings at this stage until an overall subdivision layout is known and replacement plantings can occur strategically in locations that will not be impacted by subdivision or future building works.
- (f) It is clear from the arboriculturalist report that those trees that are proposed to be removed do not have viable options for management. In the instance of tree 10, its proximity to a common boundary and neighbouring buildings means it is more cost effective to remove it. The property owner is not seeking approval to remove any trees that have been identified as viable to retain in the report.

## Complies with P2

### 7.5.3 Schedule 1 - Local Scenic Management Areas

<b>3. Western Hillside Precinct</b>
<b>Existing character statement – description and significance</b>
<p><i>The Western Hillside Precinct includes the dominant hill face that forms the principal western backdrop from the southern approach along the Midlands Highway to the central Launceston area.</i></p> <p><i>Its northern section is characterized by residential development of mixed character amongst a vegetated setting and interspersed with bands of vegetation and a treed skyline.</i></p> <p><i>The southern section of the Precinct consists of a band of native vegetation on the western side, incorporating the Kate Reed Reserve, and cleared agricultural land to the east allowing views to be seen of the mountain regions to the east of this city. This part of the Precinct also incorporates the newly developing residential area around Southgate Drive.</i></p> <p><i>The Precinct generally contributes to the middle ground and skyline views within the city.</i></p> <p><i>It is significant for its key scenic contribution to providing primarily the treed and rural vistas character to the southern approach into Launceston and the central Launceston area.</i></p>
<b>Management Objectives</b>
<ul style="list-style-type: none"> <li>a) <i>Development within the Precinct must minimise visual intrusion on the hillside by its location, form, scale, exterior materials, colours, and landscaping, particularly when viewed from major public vantage points. Visually dominating or obtrusive development, particularly along the skyline, should be avoided. Middle ground sites must be respectful of the pattern of development in the immediate area.</i></li> <li>b) <i>Maintain and improve vegetation, particularly trees, within the skyline area of the Precinct. Species selected must be consistent with the dominant character of the immediate setting.</i></li> <li>c) <i>Trees are to be encouraged throughout the Precinct. Species selected should have a height and form that will contribute to the canopy cover within the area, whilst also being consistent with the dominant character of trees, where there is an established character. Where the area is located within or near a reserve, local native species should prevail.</i></li> <li>d) <i>Increased residential density is encouraged, but only where development does not adversely interrupt the existing or historic pattern of development, and ability of the site to maintain significant vegetation. The favoured form of this type of development is one building, with shared driveways and gardens to maximise open space available for vegetation.</i></li> <li>e) <i>Subdivisions are to address bushfire safety and vegetation management requirements to achieve visually unobtrusive development with sufficient vegetation coverage to retain the Precinct's character, or allow for the replacement vegetation to meet the character of the Precinct.</i></li> <li>f) <i>In the southern part of the Precinct, encourage only sympathetic development that will retain the rural character of the precinct.</i></li> </ul>

**Assessment:** The proposal is to remove trees that have been deemed unsafe by an arborist. It is reiterated that the majority of the trees to be removed are Pinus Radiata, an exotic weed species.

Assessment in relation to each of the management objectives is as follows:

- a) Not applicable – no development proposed.
- b) Whilst the proposal is for tree removal, all trees have been deemed unsafe. It is submitted that removal of the pine trees, whilst it will alter the skyline, it will actually improve it by allowing the well-established eucalypts to form the skyline with glimpses through to the vineyard and historic Mount Pleasant homestead. The appearance of Eucalypts on the skyline is more consistent with the surrounding character than that of pine trees.
- c) Replacement planting is not proposed at this stage given the treed skyline vista will remain and the owners plans for future subdivision mean that tree planting at the time of subdivision would be more prudent.
- d) Not applicable
- e) Not applicable
- f) Not applicable

On the basis of the above assessment it is submitted that the proposed tree removal will accords with the management objectives.

## 5.4.2 E 8.0 Biodiversity Code

### E8.1 Purpose of the Code

- E8.1 a) support the conservation of biodiversity in the planning scheme area and the northern region, including the extent, condition and connectivity of important habitats and priority vegetation communities, and the number and status of threatened species; and
- b) consider and manage the impact of use or development on biodiversity through:
- (i) minimisation of vegetation and habitat loss or degradation; and
  - (ii) appropriate location of development

### E8.6 Development Standards

#### 8.6.1 Habitat and Vegetation Management

<b>Objective:</b>	
To ensure that:	
<b>Acceptable Solutions</b>	<b>Performance Criteria</b>
<b>A1</b> <i>Clearance or disturbance of priority habitat is in accordance with a certified Forest Practices Plan or;</i>	<b>P1</b> <i>Clearance or disturbance of native vegetation within priority habitat or areas identified as priority vegetation communities does not compromise the adequacy of representation of species or vegetation communities, having regard to:</i> <ul style="list-style-type: none"> <li>a) <i>the quality of the site to provide habitat of significance to the maintenance or protection of biodiversity in the planning scheme area;</i></li> <li>b) <i>the need for the clearance or disturbance of the vegetation;</i></li> <li>c) <i>the method of clearance or disturbance of the vegetation;</i></li> <li>d) <i>the extent and quality of the vegetation or habitats affected by the proposal;</i></li> <li>e) <i>the value of the vegetation as a wildlife corridor;</i></li> <li>f) <i>the value of riparian vegetation to the protection of habitats and wildlife corridors;</i></li> <li>g) <i>any rehabilitation and maintenance measures;</i></li> <li>h) <i>.the impacts of development and vegetation clearance, in proximity to the priority habitat or priority vegetation communities;</i></li> <li>i) <i>any conservation outcomes achieved and the long term security of any offset for the loss of vegetation, provided in accordance with the Department of Primary Industries, Parks, Water and Environment General Offset Principles;</i></li> </ul>

<b>Acceptable Solutions</b>	<b>Performance Criteria</b>
	<p>j) any agreement under section 71 of the Act relating to vegetation management;</p> <p>k) any conservation covenant made under the Nature Conservation Act 2002, that exists on or adjacent to the site of the proposed development; and</p> <p>l) any recommendations or advice contained in a flora and fauna report.</p>

#### **Assessment:**

As this clause only applies to the removal of native trees, the following trees proposed to be removed shall NOT be included in the assessment against this clause:

- 1 x 76 (radiata pines)
- 23 (pin oak)
- 25 (cypress)
- 55 (liquid amber)

This application is accompanied by a Flora and Fauna report prepared by GHD's qualified botanists and a review of that report undertaken by North Barker (refer to letter attachments). Both those reports recognise that of the area identified as priority habitat on the planning scheme overlay maps, more than half constitutes either the FPL or FAG vegetation communities. It is therefore considered that the application of the priority habitat overlay across the site is rather arbitrary and hasn't been undertaken on the basis of a detailed site review.

Given two flora and fauna assessments of the actual conditions on the site have clearly identified the areas which constitute a native vegetation community (DAZ), the focus of this assessment will be on the trees to be removed in those areas.

Therefore of the trees proposed to be removed, it is considered that the following actually fall within an identified native vegetation community:

- 3, 6, 10, 18

Of these trees it is clear from the Arboriculturalist report that numbers 3,6 and 18 are in poor condition and should be removed. Retention of tree 10 is possible according to the report but given its close proximity to a shared residential boundary, the cost of the remedial works required will be high and given the risk it poses to a neighbouring property (located approximately 10 metres from a shed), approval is sought for its removal.

An assessment of the removal of the 4 trees that form part of the DAZ community against the criteria in P1 is as follows:

- (a) Trees 3, 6 and 10 are quite spread out within the section of DAZ community in the north-eastern portion of the lot. It is submitted that careful removal of these trees will have limited impact on the understorey. Neither of the trees proposed to be removed are individually listed and the one hollow bearing tree identified in the flora and fauna report is proposed to be retained. Tree 18 is within an area of DAZ community considered to be low quality.
- (b) The attached arboricultural report clearly demonstrates there is a safety risk posed by each of the trees proposed for removal.
- (c) The tree removal will be undertaken by a qualified arborist to ensure damage to neighbouring trees is avoided.

- (d) Each of the DAZ communities is only very small and tree 18 is in a community that is of low quality. The removal of a small number of trees is not considered to have a significant impact on the community.
- (e) The removal of the individual trees will not impede use of the site as a wildlife corridor.
- (f) Not applicable
- (g) Rehabilitation and maintenance to remaining trees may occur.
- (h) The vegetation is required to be removed for safety reasons.
- (i) It is understood that DPIPWE typically will not require offset where the whole community is not being cleared.
- (j) Not applicable
- (k) Not applicable
- (l) The proposal to remove 4 single trees within the DAZ community that have been assessed as unsafe by an arboriculturalist does not prejudice the attainment of the recommendations in both flora and fauna reports.

#### Complies with P1

## 6 Conclusion

The proposal to remove 95 trees that are of poor quality and considered a safety risk on the property is accompanied by a range of reports that clearly demonstrate that the tree removal will not impact on threatened species or wildlife habitat and will not have a significant impact on the skyline vistas.

The North Barker Flora survey has noted that the viability of the identified native vegetation communities is at risk if there is no weed management in terms of the pine trees. The removal of the pine trees on the site is expected to improve the viability of the native vegetation communities.

The proposed tree removal invokes two dispositions and it is considered that it meets the relevant performance criteria. Trees are a living organism and have a natural lifespan. It is important within an urban setting such as the subject site that when trees reach the end of their lifespan, and become a hazard to users of the property, they should be removed in an appropriate manner. It is therefore submitted that the proposed tree removal is entirely appropriate and should be approved.

Should you have any queries regarding this application, please do not hesitate to contact the undersigned.

Sincerely

## **Introduction:**

Arborimage Tree Services has been approached by Chloe Lynn on behalf of Kleglinger Australia Pty Ltd to provide a tree inspection and report on the health and overall safety of specified trees located within the grounds of 123 Westbury Rd, Launceston.

The aim of this survey is to:

1. Assess the trees for overall Health and Stability as well as identifying trees that pose any immediate risk or potential hazards to persons or property within their vicinity.
2. Recommend any tree works that are necessary to reduce the risk and hazards associated with these trees.

These trees have been identified and assessed individually, where there were multiple trees of the same variety and recommendations, these trees were assessed as a group. There is evidence to suggest that some trees may be dangerous and pose a risk to persons and property.

The trees were surveyed from ground level only and no aerial or underground inspections were undertaken. This report only refers to the condition of the trees on the survey date (11/05/15). It must always be remembered that trees are dynamic organisms, being subject to continuous change, and should therefore be re-evaluated on a regular basis.

## **Procedure:**

- Digital Photographs were taken to validate and confirm various tree data issues and other site inconsistencies for future reference.
- All trees on the site were inspected from the ground using Visual Tree Assessment (VTA) Techniques – (Steps 1 & 2, The Body Language of trees: Mathick & Breloer), Quantified Tree Risk Management techniques and the assessor's experience as a working Arborist.
- Data was collected using visual assessment, note taking, tape measure, binoculars and digital photographs.

**Method:**

The following information has been included in the survey:

- i) *Species:* The Botanical name of each tree (and/or the common name if appropriate) was recorded.
- ii) *Tree Number:* Each tree was given a number which correlates with the map of the site.
- iii) *Height and Canopy Spread:* The Height and Canopy Spread of each tree was estimated and recorded.
- iv) *Age:* The current age category of each tree was estimated using the surveyor's experience, and trees were classed as follows;
  - Young (Y) – established trees up to one third of their expected ultimate height.
  - Semi-mature (SM) – trees between one third and two thirds their expected ultimate height.
  - Mature (M) – trees of more or less full height but still increasing in girth.
- v) DBH: (Diameter at Breast Height in cm).The trees were looked at either individually or as a group and the diameter was measured at breast height to give an idea on the significance of the tree to the local area. Generally trees with a DBH greater than 50cm are recognized as being of some significance.
- vi) *Condition:* Condition is the combination of health and structure and provides a final rating for each tree. When there is a variance between the health rating and structure rating, the lowest rating will be recorded as the overall condition rating e.g. any tree with a fair health rating and a poor structure would be given a condition rating of poor.

## **Priority Rating:**

The condition of each tree was assessed using Visual Tree Assessment (VTA) and Quantified Tree Risk Assessment techniques. Trees were classed using the following numbered categories.

- 1: Life threatening - Tree condition is life threatening
  - 2: Potentially life threatening – Trees that are not currently life threatening but have the potential to become life threatening in the near or not too distant future.
  - 3: Some danger but not life threatening – Trees that are not life threatening but do present some safety or health hazard.
  - 4: No apparent danger – Trees that present no apparent danger but may require maintenance for the health of the tree.
  - 5: Trees that are or have the potential to cause damage to infrastructure.

## Discussion:

The site under discussion is located at 123 Westbury Road, South Launceston. Adjacent to the Historical Homestead of Mount Pleasant. The site is approximately 3.8 hectares in size and currently consists of numerous tree species of mixed variety covering the majority of the site and an under developed driveway leading to an existing residence on the South West corner.

The mature trees on the site mainly consist of three species of tree as follows:

1. Radiata Pine (*Pinus Radiata*)
2. Black Peppermint Gum (*Eucalyptus amygdalina*)
3. White Gum (*Eucalyptus viminalis*)

The remainder of the trees mainly consist of introduced species of European varieties with the exception of some undergrowth Australian Native species of tree and shrubs.

There is a group of mixed European tree species planted in an ornamental fashion on the South West corner of the site. These trees have a lot of aesthetic appeal and are planted in an orderly fashion, with Arboricultural works this area could be quite a feature garden/park in the future plans for the site.

The Northern end of the site closest to Westbury Road consists mainly of large Radiata Pine trees, of which there are approximately 76 trees considered to be semi mature to mature of age; there are numerous saplings of this species in the understory as well.

This species of tree is a known weed and is a very invasive tree for the ability to spread seed and grow in almost any site condition, while also raising acidity levels in soils and preventing the growth of natural endemic species.

The majority of the large Radiata pines on this site are considered to be of a mature age for an urban situation and almost all of this species of tree on the Mount Peasant site are considered to be in poor overall condition. They also present numerous hazards to persons and property coming close to their vicinity. Long term management of hazards in these trees is not recommended unless necessary and there should be no argument to having all of this species of tree removed from the site to prevent further spread into the surrounding areas of urban environment and allow for site rejuvenation for future development of the landscape.

The second most predominant species of tree throughout the site is the *Eucalyptus amygdalina* (Black Peppermint Gum) This species of tree is endemic to the area and considered of some importance in the overall ecology of the site. There are 27 trees of this species with only 5 of these considered to be of significance to the site due to their mature age, generally good health and structure and habitat values for nesting wildlife. The rest of the trees of this species still hold some significance due to them being endemic to the local area but are generally in poor condition or competing for growing space as the table below will state.

The third most predominant species of tree throughout the site is the *Eucalyptus viminalis* (White Gum) of which there are 13 trees in total with only 1 of these considered ultimately significant to the site due to the mature age, generally good health and structure and habitat values for nesting wildlife.

The table below will list the results of the individual tree assessments and give a better understanding to the health, structure, and significance of individual trees.

# Mt. Pleasant Arboriculture Report 2015

**Figure 1: Mapped location of trees numbered 2 to 58 assessed in this report. (Trees not numbered are Radiata Pines discussed as no. 1)**

**Tree Health and Condition Survey***Location: Mt Pleasant, Launceston**Date: 26/05/2015*

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
1 X 76 trees	Pinus radiata (Radiata Pine) X 76	30cm to 120 cm	3m to 25m	2m to 15m	Poor	Young to Mature	1	Known weed species, saplings spreading uncontrollably, Most trees have numerous hazards present and are generally considered senescent and immediately dangerous to persons or property coming close to their vicinity.	Remove all trees of this species from site.
2	Eucalyptus armygdalina (Black Peppermint Gum)	150cm	30m	16m	Fair to Good	M	2	Fairly significant tree for endemic value. Multi trunked at 2 and 5 meters, 4 minor decay pockets in lower trunk, active hollows for habitat. Evident callousing of decay.	Removal of immediate hazards is possible, long term decay issues are foreseeable. Remove major deadwood, weight reduce heavy lateral branches.
3	Allocasuarina species (She oak)	50cm	8m	5m	Poor	SM	3	Failed branches throughout, weak branch unions.	Remove tree.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
4	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	60cm	22m	10m	Fair to Good	SM	2	Crowded growing conditions, Recently failed branches.	Retention is possible although not seen as overly significant tree.
5 X 2 trees	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum) x 2	40cm	7m	5m	Fair	SM	2	Crowded growing conditions for eventual size, Failed branches and some decay.	Retention is possible although not seen as overly significant tree
6	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	120cm	23m	12m	Poor	M	1	Tree in significant decline, numerous past failed branches. Evident decay in base. Crown dieback.	Remove tree
7 X 6 trees	<i>Pinus sylvestris</i> (Scots Pine)	15 to 60cm	10 to 15m	3 to 5m	Fair to Good	SM	3	Crowded growing conditions for eventual size. 2 x larger Scots Pines have good health and structure.	Retention is possible although not seen as overly significant tree
8 x 9 trees	<i>Eucalyptus viminalis</i> (White Gum) X 9	10 to 40cm	5 to 16m	3 to 8m	Fair	Y to SM	2	Crowded growing conditions, 2 x dead trees, 1 tree with crown dieback.	Retention is possible although not seen as overly significant tree

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
9	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	50cm	17m	5m	Good	SM	4	No immediate hazards present	Not overly significant. No immediate works required.
10	<i>Eucalyptus viminalis</i> (White Gum)	140cm	25m	12m	Fair	SM	1	High impact zone with residential property nearby, Decline in upper canopy, evident borer damage. Swelling/decay in major branches.	Significant habitat tree. Crown reduction to remove major hazards and improve stability. Removal of dead/decayed branches. Or remove tree.
11	<i>Pinus sylvestris</i> (Scots Pine)	80cm	22m	8m	Fair to Good	SM	2	3 x failed/hanging branches. Good structure	Removal of dead/hanging branches
12	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	120 cm	25m	15m	Good	M	2	Considered significant to local area for endemic and habitat value. Bifurcated trunk at 3 meters fair union. Natural deadwood throughout.	Significant tree worth retaining if possible. Remove major dead/decayed branches, weight reduce heavy lateral branches.
13	<i>Sequoia species</i> Redwood	15cm	6m	3m	Good	Y	3	Healthy tree with good structure, Very crowded by large surrounding trees, Will be very large tree	Not considered significant at this stage. Retention is possible.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>C S (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
14 x 5 trees	Eucalyptus armygdalina (Black peppermint Gum) x 5	50 to 140cm	15 to 25m	5 to 10m	Fair to Good	SM to M	1 - 2	5 trees in row from North to South, 3 x larger trees more significant in Health & Structure, major deadwood mainly in lower canopies, some evidence of borer.	Possible to retain trees with hazard reduction works although long term hazards envisioned if site becomes residential.
15 X 3 trees	Eucalyptus armygdalina (Black Peppermint Gum)x 3	30 to 60cm	12 to 20m	7m	Poor	SM	1	Major failed branches and trunks, heavy lateral branches. Eminent future failure.	Remove trees
16 X 4	Eucalyptus armygdalina (Black Peppermint Gum)x 4	30 to 110cm	20 to 25m	5 to 10m	Fair to Good	SM	2	Crowded growing conditions, Overhanging driveway, Major deadwood throughout, some internal branch decline, 3 x recent branch failures close to drive. Some decay present and weak branch unions.	Retention is possible by removal of hazards and weight reducing heavy lateral branches. Not considered overly significant to site.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>C S (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
17	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	240cm	30m	15m	Good	M	2	Very significant tree for age and endemic values. Bifurcated trunk at 1m with good union, some deadwood and heavy lateral branches.	Removal of deadwood and decayed branches, weight reduction of heavy lateral branches.
18	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	100cm	18m	10m	Poor	SM	2 + 5	Bifurcated trunk at ground has failed, Half tree is dead, Other half is leaning into canopy of neighbouring tree.	Remove tree
19	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	140cm	25m	15m	Good	SM	2	Very significant tree for age and endemic values. Bifurcated trunk at 3m with good union, some deadwood and heavy lateral branches.	Removal of deadwood and decayed branches, weight reduction of heavy lateral branches.
20	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	80cm	12m	8m	Fair to good	M	2	Very significant tree for age and endemic values. Multi trunked at base x 4 with fair to good unions, Some swelling in trunks suggest insect activity, Deadwood throughout	Removal of deadwood and decayed branches, weight reduction of heavy lateral branches. If retained would benefit from cable bracing.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
21	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	80cm	20m	10m	Poor to Fair	SM	2	Heavy lean to north, some decay in lower trunk.	Remove tree.
22	Quercus Palustris (Pin Oak)	70cm	16m	10m	Good	SM	3	Significant amenity tree with good health, structure and overall habit of tree, would benefit from formal prune.	Retain if possible, uplift canopy and formal prune.
23	Quercus Palustris (Pin Oak)	40cm	15m	8m	Fair to Good	SM	3	Crowded growing position for eventual size, Misshapen canopy spread.	Remove tree

24	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	70cm	15m	10m	Fair	SM	2	Crowded growing conditions	Remove tree
25	Cupressus species (Cypress)	60cm	18m	5m	Fair	SM	4	Crowded growing conditions for eventual size.	Remove tree
26	<i>Quercus coccinea</i> (Scarlet Oak)	110cm	16m	18m	Good	SM	3	Significant amenity value, very good example of this species. Would benefit from formal prune.	Significant tree worth retaining if possible, formal prune and uplift canopy.
27	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	85cm	15m	10m	Poor	SM	2	Bifurcated trunk with one side completely dead, extensive decay in main trunk.	Remove tree.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
28	<i>Eucalyptus amygdalina</i> (Black Peppermint Gum)	40cm	14m	5m	Poor	SM	2	Decay at base and at 1.5 m of trunk.	Remove Tree.
29	Arbutus unedo (Irish Strawberry)	40cm	4m	4m	Fair	SM	3	Some crown decline and deadwood throughout, Multi trunked at base.	Not considered overly significant to site but can be retained if necessary by formal prune.
30	<i>Eucalyptus nicholii</i> (Narrow leaved peppermint Gum)	100cm	16m	13m	Fair to Good	M	3	Significant example of species, Small hollow at base with active bee hive, 2 x large branch failures on NE of tree.	Tree can be retained by weight reduction of heavy lateral branches and formal prune.
31	<i>Quercus palustris</i> (Pin Oak)	20cm	8m	4m	Good	Y	4	Crowded by large peppermint gum, leaning to west, Good habit and form.	Not considered overly significant to site, No hazards present.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>C S (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
32	<i>Castanea dentata</i> (Chestnut sp)	30cm	5m	5m	Good	SM	4	Good habit and form for species, Not overly significant at this size.	Retain if possible No hazards present
33	Eucalyptus viminalis (White Gum)	70cm	16m	8m	Good	Sm	4	Good health and structure, no immediate hazards present	No immediate works required, not considered overly significant to site at this stage.
34	Eucalyptus viminalis (White Gum)	120cm	20m	15m	Fair to Good	M	2	Major deadwood and borer damage at top of main trunk plus 3 branches.	Tree can be retained if required by removal of dead/decayed branches and weight reduction of heavy lateral branches. Or remove.
35	Eucalyptus viminalis (White Gum)	320cm	35m	20m	Fair to Good	M	1	Very large endemic tree considered significant to local area and for habitat reasons, 6 x past failed branches, dead branches throughout. Within 40m of existing residential. Possibly largest White Gum in local area.	Tree should be retained if possible, Remove major dead/decayed branches, Weight reduce crown and heavy lateral branches.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>C S (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
36	<i>Sequia species</i> (Redwood)	70cm	16m	9m	Good	SM	4	Good health and structure, very large tree at maturity, Estimated 1/10 of eventual size.	No immediate hazards present. Not considered overly significant to site at this stage.
37	Picea pungens (Blue Spruce)	25cm	8m	5m	Good	Sm	3	Good health and structure, English Ivy growing on trunk will cause problems if not removed.	Remove English ivy and cotoneaster tree under.
38	Betula pendula (Silver Birch)	30cm	11m	5m	Good	SM	3	Major sucker growth at base, generally good form for species.	Formal prune would improve long term health and structure.
39	Betula pendula (Silver Birch)	30cm	11m	5m	Good	SM	4	Generally good form for species.	No immediate works required.
40	Pyrus species (Ornamental pear)	50cm	14m	10m	Good	M	3	Good form, health and structure, some dead/decayed branches.	Formative prune.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>C S (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
41	Pyrus species (Ornamental pear)	25cm	10m	5m	Good	SM	4	Good form, health and structure, some dead/decayed branches.	Formative prune.
42	Picea species (Spruce)	35cm	10m	6m	Good	Sm	3	Good health and structure, English Ivy growing on trunk will cause problems if not removed. Low branches.	Remove English ivy and cotoneaster tree under.
43	Quercus palustris (Pin Oak)	70cm	17m	12m	Good	SM	3+5	Significant amenity value to site, minimal overall hazards, very busy internal branches, Low branches to ground.	Formative prune would improve long term health and structure. Uplift to 4m.
44	Liquidamber styraciflua	45cm	16m	12m	Good	SM	4	Crowded on southern side by Oak, Limited growing space for eventual size.	Can be retained but may suit removal to allow surrounding trees to benefit.
45	Cedrus atlantica (Atlantic Cedar)	50cm	16m	10m	Good	M	3	Good form, health and structure.	No immediate works required.

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
46	<i>Betula pendula</i> (Silver Birch)	25	14m	6m	Good	SM	4	Good habit, health and structure.	No immediate works required.
47	<i>Acer species</i> (Maple)	100cm	17m	12m	Fair to Good	SM	3	Multi trunked at 2m with tight trunk unions, crossing/rubbing branches throughout.	Formative pruning by removing crossing/rubbing branches to improve future health and structure. Not significant to site
48	Sorbus species (Rowan)	80cm	5m	5m	Fair to Good	Sm	3	Multi trunked at base with busy internal branch habit.	Formative prune to improve future health and structure.
49	<i>Picea species</i> (Spruce)	30cm	7m	5m	Good	Y	4	Good habit, health and structure.	No immediate works required.
50	<i>Cedrus atlantica</i> (Atlantic Cedar)	50cm	17m	10m	Good	SM	4	Considered significant for this species with good habit, health and structure.	Formative prune and possible uplift of low branches.

Mt. Pleasant Arboriculture Report 2015

<b>Tree Number</b>	<b>Species</b>	<b>DBH (Diameter at Breast Height)</b>	<b>H (Height)</b>	<b>CS (Canopy Spread)</b>	<b>Condition (Health &amp; Structure)</b>	<b>Age</b>	<b>Priority</b>	<b>Comments</b>	<b>Recommendations</b>
51	<i>Cupressus species</i> (Cypress)	40cm	15m	8m	Good	SM	4	Good health and structure	No immediate works required
52 X 2 trees	<i>Cupressus species</i> (Cypress)	35cm	14m	6m	Good	Sm	4	Good health and structure	No immediate works required.
53 X 3 trees	Betula pendula (Silver Birch) x 3	30cm	9m	5m	Good	SM	4	Good health and structure	No immediate works required
54	Acacia melanoxylon (Blackwood wattle)	40cm	11m	8m	Good	SM	4	Minor deadwood, good health and structure	No immediate works required
55	Liquidamber styraciflua (Liquidamber)	40cm	12m	7m	Good	SM	3	Crowded growing conditions for eventual size	Possible removal to allow other trees to benefit.

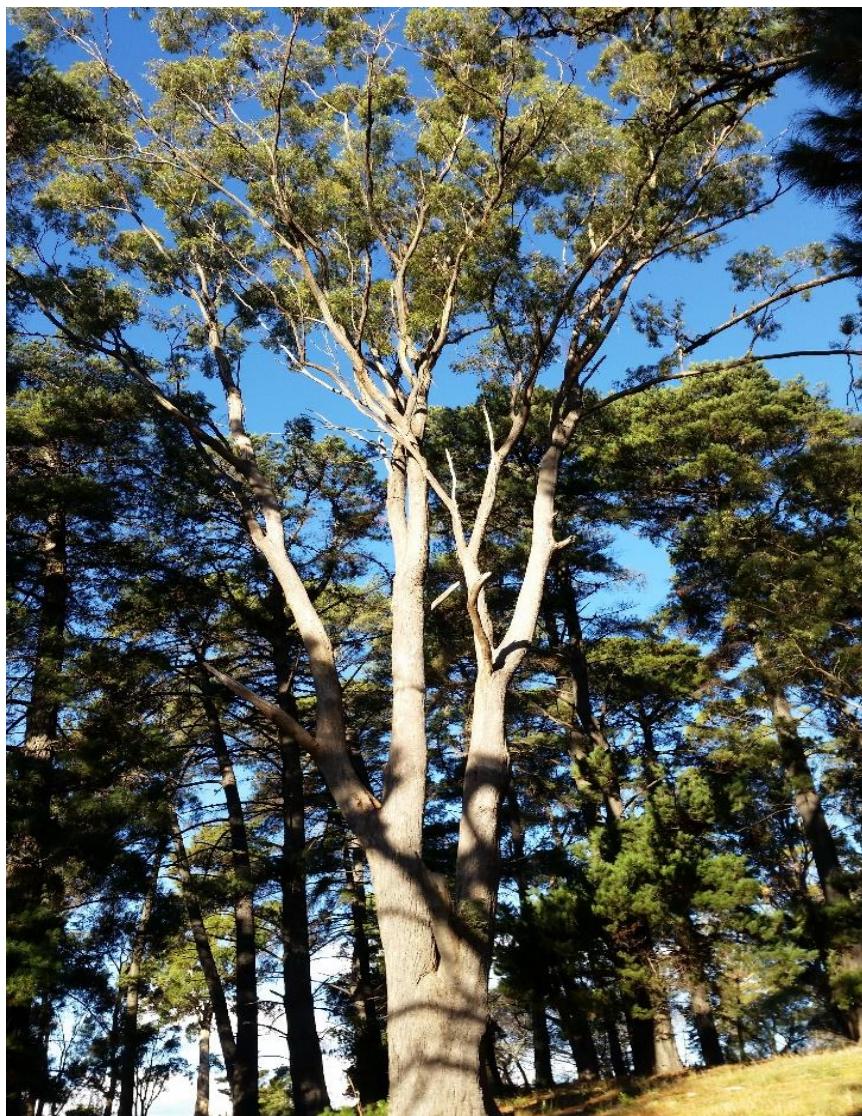

**Photo 1: Showing large branch failures and poor Health and Structure of the large Radiata Pine trees on the Northern most end of the site.**

**Photo 2: Tree number 2, Eucalyptus amygdalina (Black Peppermint Gum)** This species is considered endemic to this site. Unfortunately most of these trees are overcrowded by surrounding trees and do present long term hazards with overweighted branches, dead/decayed sections and some poor health and structure. There are 4 to 6 very large trees of this species on site that may be worth retaining,

**Photo 3: Tree number 35, Eucalyptus viminalis (White Gum), this tree is considered quite significant to the site, being that it is endemic and looks to be the largest tree of its species in the local area. It presents numerous hazards in its current state but should be retained if possible using Arboricultural pruning methods.**

**Conclusion:**

It is proposed that at some stage in the near future the site discussed in this report at 123 Westbury Road, South Launceston, will be developed for residential purposes, subject to approval with the local Council.

With the numerous weed species rapidly covering the site and many other trees in decline for various reasons, it should be considered that by developing the site and retaining some of the trees for aesthetic and amenity value, the long term management of this site would be greatly improved.

I would suggest that some of the larger trees of endemic value, that show exceptional health and structure be retained by Arboricultural pruning methods and also quite a few of the introduced European varieties can add huge amenity value to the long term planning and development of this site. There are large areas that contain trees seen as being senescent, that is 'of a mature age with irreversible decline issues', and numerous trees young and semi-mature in age that are competing for good growing conditions and therefore have become hazardous and unmanageable if the site were to be developed for residential purposes. By developing and eventually landscaping the site with trees and plants suitable to the site conditions, I consider the site can be greatly improved from its current state.

If there are any further questions in relation to this report please feel free to contact me.

Regards,

Ryan James

## **Arboricultural Consultancy Assumptions and Limiting Conditions**

1. Any legal description provided to the consultant is assumed to be correct. Any titles and ownerships to any property are assumed to be good. No responsibility is assumed for matters legal in character.
  2. It is assumed that any property/project is not in violation of any applicable codes, ordinances, statutes or other government regulations.
  3. Care has been taken to obtain all information from reliable sources. All data has been verified in so far as possible; however the consultant can neither guarantee nor be responsible for the accuracy of the information provided by others.
  4. The consultant shall not be required to give testimony or to attend court by reason of this report unless subsequent contractual arrangements are made, including payment of an additional fee for such services.
  5. Loss or alteration of any part of this report invalidates the entire report.
  6. Possession of this report or a copy thereof does not imply right of publication or use for any purpose by anyone but the person to whom it is addressed, without the prior written consent of the consultant.
  7. Neither all nor any part of the contents of this report, nor any copy thereof, shall be used for any purpose by anyone but the person to whom it is addressed, without the written consent of the consultant; nor shall it be conveyed by anyone, including the client, to the public through advertising, public relations, news, sales or other media, without the written consent of the consultant.
  8. This report and any values expressed herein represent the opinion of the consultant and the consultant's fee is in no way contingent upon the reporting of the specified value, a stipulated result, the occurrence of a subsequent event, nor upon any finding to be reported.
  9. Sketches diagrams, graphs and photographs in this report, being intended as visual aids, are not necessarily to scale and should not be construed as engineering or architectural reports or surveys.
  10. Unless expressed otherwise: 1) Information contained in this report covers only those items that were examined and reflect the condition of those items at the time of inspection; and 2) the inspection is limited to visual examination accessible components without dissection, excavation or probing. There is no warranty or guarantee, expressed or implied that the problems or deficiencies of the plants property in question may not arise in the future.

## Mt Pleasant, 123 Westbury Road, Launceston

### AUDIT OF GHD REPORT

#### VEGETATION ASSESSMENT

This report has been prepared to assess the native vegetation at the Mt Pleasant Heritage Property at 123 Westbury Road, Launceston. The purpose of this assessment is to review the findings and conclusions made in a separate investigation undertaken by GHD earlier in the year.<sup>1</sup>

The survey was undertaken on the 11<sup>th</sup> December 2012 by Karen Ziegler from North Barker Ecosystem Services. This was a time limited survey of 4 hours that concentrated on native species and native vegetation communities. The horticultural specimens in the cleared urban area were not identified unless they appeared in amongst the native vegetation as environmental weeds.

The area closest to the Westbury Road supports old plantings of *Pinus* species and remnants of dry sclerophyll eucalypt forest. Both the native and planted forest supports a range of introduced and native understorey vegetation.

There is evidence that some native vegetation understorey has been removed in the recent past; shrubs have been cut off at ground level and some areas of grassy vegetation slashed.

The following description is of land shown in the attached figure. The vegetation is subdivided into the equivalent TASVEG classification.<sup>2</sup>

- Approximately 0.4 ha of *Eucalyptus amygdalina* inland forest on Cainozoic deposits is present in two patches (DAZ). A third area of DAZ mapped by GHD was considered too small to be considered a community – there was only one eucalypt present and a very small area of native vegetation amongst planted pines.

This community is in poor to moderate condition due to the number of introduced species, particularly in the more southerly patch, however a moderate diversity of native species still persists and threatened flora species are present in both patches. The abundance of pine seedlings and the presence of the 'declared weed'<sup>3</sup>, boneseed, suggest that without pro-active management for the natural values, the native species diversity may decline in the face of increasing weed competition. The structural integrity has been significantly simplified with the removal of moderate sized trees. The shape and size of the patches also increases the pressure from invasive species.

<sup>1</sup> Report titled: Kreglinger Australia Pty Ltd. Report for Mount Pleasant. Flora and Fauna Assessment. April 2012

<sup>2</sup> TASVEG is the Tasmanian state vegetation map maintained by the Tasmanian State Government which attributes all land to a series of mapping units. The mapping units are described in Harris & Kitchener (2005).

<sup>3</sup> Weed Management Act 2001

The canopy is dominated by black peppermint (*Eucalyptus amygdalina*) with white gum (*Eucalyptus viminalis*) also present. The sparse tall shrub, low tree layer contains bull oak (*Allocasuarina littoralis*), drooping sheoak (*Allocasuarina verticillata*), native cherry (*Exocarpos cupressiformis*), silver wattle (*Acacia dealbata*), black wattle (*Acacia mearnsii*), blackwood (*Acacia melanoxylon*) and regrowth *E. amygdalina*. The ground cover is dominated by grasses with wallabygrass (*Austrodanthonia* sp.) and speargrass (*Austrostipa* sp.). Common native species present include the threatened chocolate lily (*Arthropodium strictum*), flax lily (*Dianella revoluta*), grass lily (*Caesia parviflora*), narrowleaf sword-sedge (*Lepidosperma gunnii*), golden heath (*Styphelia adscendens*) and arrow flat-pea (*Platylodium triangulare*). The patch of DAZ to the south has an understorey dominated by introduced grasses although there is a substantial patch of the vulnerable *Scleranthus fasciculatus* amongst the quaking grass. A list of species recorded is in Appendix A.

- DAZ is listed as threatened under the Tasmanian Nature Conservation Act 2002.

Recently cleared understorey in DAZ

DAZ with abundant pine wildlings

- There is 1.3 ha of land broadly identified as plantation for silviculture (FPL) which is a historical planting that supports a range of native flora.
- There is 2.1 ha of land that has been mapped as urban area (FUR) which is not agricultural land although it has been in the past. It is dominated by introduced grasses with occasional mature eucalypts and planted horticultural specimen trees.
- 98 species were recorded of which 62 are native including 2 threatened plant species listed under the Tasmanian Threatened Species Protection Act 1995 (TSPA) - *Arthropodium strictum* - chocolate lily (rare) and *Scleranthus fasciculatus* - spreading knawel (vulnerable) and 5 'declared' weeds listed under the Weed Management Act 1999. No species listed under the Commonwealth Environment Protection and Biodiversity Conservation Act 1999 (EPBCA) were recorded.
- The population of *Arthropodium strictum* – chocolate lily listed as rare under the Tasmanian Threatened Species Protection Act 1995 (TSPA) from the survey is in excess of 250 plants. This species occurs in both the plantation and remnant DAZ. There would be highly likely to be more

plants particularly in the understorey to the pine plantings but time did not allow the thorough assessment of the population.

- The population of *Scleranthus fasciculatus* – spreading knawel listed as vulnerable under the Tasmanian Threatened Species Protection Act 1995 (TSPA) covers an area of 4 square metres. It is not possible to distinguish individual plants.

**Chocolate lily (r/-)**

**Spreading knawel (v/-)**

- Destruction or disturbance of either or both species of plant listed under the Tasmanian Threatened Species Protection Act 1995 (TSPA) will require a permit.
- Two native orchids were recorded being *Thelymitra* sp and *Microtis parviflora*. The *Thelymitra* sp were going to seed and could not be identified to species level. There are no listed *Thelymitra* species recorded within 5 km of the study area.
- There were some differences in the species list between the two surveys that are attributable to season. For example two species absent from the GHD survey are *Caesia parviflora* which would have died down by autumn and *Wahlenbergia stricta* which is much more visible when flowering. This justifies the recommendation by GHD that “follow up surveys may be required”.
- There were minor differences in the shrubs recorded. The North Barker survey did not identify either of the *Epacris* species. These may have been cleared recently. There were also trees and shrubs identified not recorded by GHD including *Styphelia adscendens* and *Allocasuarina verticillata*. The reports also disagreed on the species of *Lepidosperma*. The implications of these differences are insignificant.
- Figure 1 shows the vegetation and threatened species and some of the locations of weed species.
- The extent of *Eucalyptus amygdalina* forest (DAZ) approximates in location but is less in area than that shown on the GHD report.
- It is acknowledged that the long term viability of these small and degraded remnants is poor. In the absence of committed weed

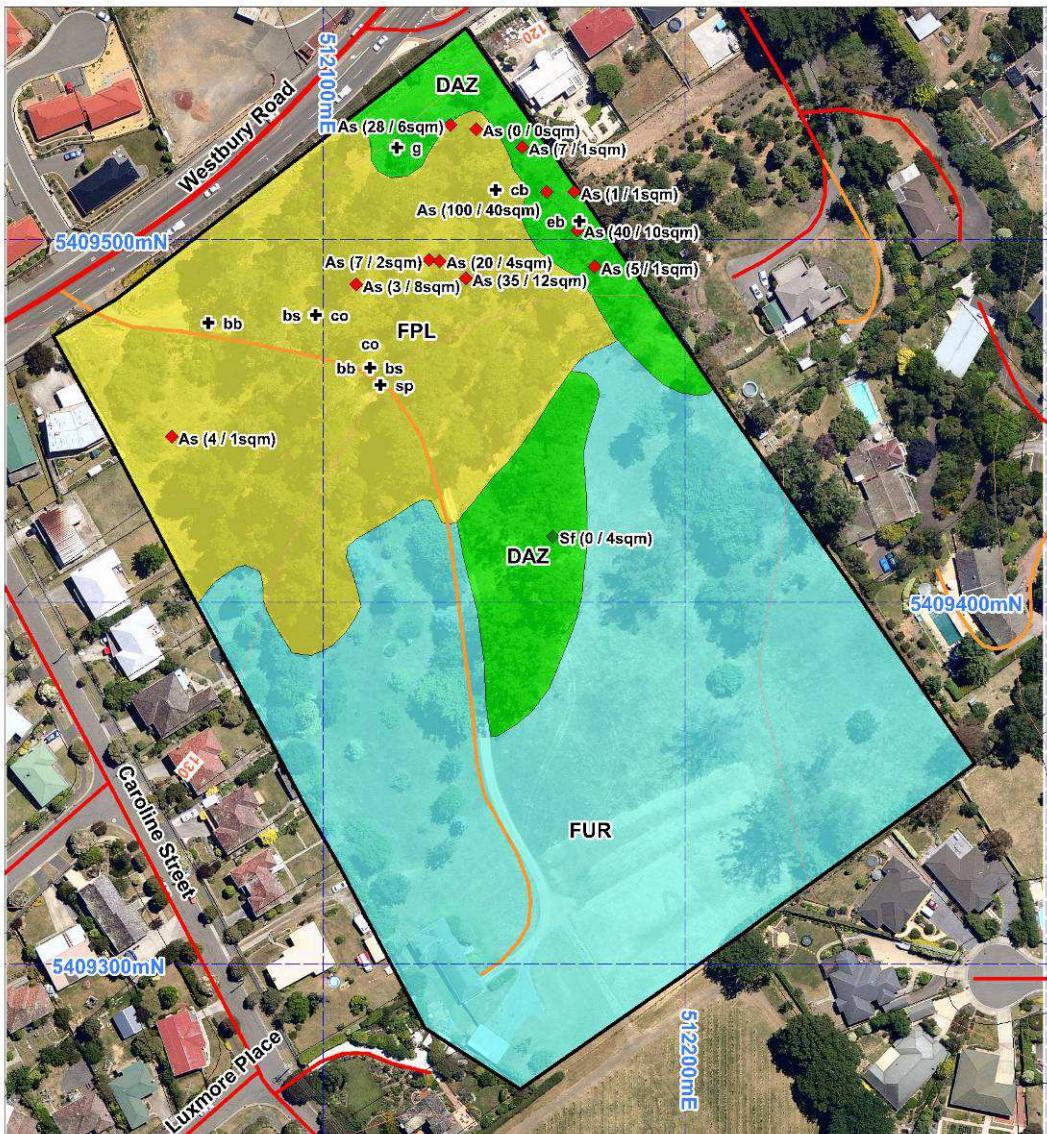

control (pine and boneseed removal) it can be anticipated that the habitat for threatened species may decline.

- The suburban environment does not provide the most suitable location for reserving chocolate lily (*Arthropodium strictum*) which is well represented in larger well known reserves in the greater Launceston area.
- Further research may be needed to provide context to any proposal to remove plants of spreading knawel (*Scleranthus fasciculatus*). There are 13 records for this species from the North Midlands bioregion of which only two are located within private reserves – none in dedicated or other formal reserves.<sup>4</sup>

## Kreglinger Australia Pty Ltd

Report for Mount Pleasant  
Flora and Fauna Assessment

April 2012

This Mount Pleasant Flora and Fauna Report ("Report"):

1. has been prepared by GHD Pty Ltd ("GHD") for Kreglinger Australia Pty Ltd;
2. may only be used and relied on by Kreglinger Australia Pty Ltd;
3. must not be copied to, used by, or relied on by any person other than Kreglinger Australia Pty Ltd without the prior written consent of GHD;
4. may only be used for the purpose of understanding the ecological values within the study area (and must not be used for any other purpose).

GHD and its servants, employees and officers otherwise expressly disclaim responsibility to any person other than Kreglinger Australia Pty Ltd arising from or in connection with this Report.

To the maximum extent permitted by law, all implied warranties and conditions in relation to the services provided by GHD and the Report are excluded unless they are expressly stated to apply in this Report.

The services undertaken by GHD in connection with preparing this Report:

- Were limited to those specifically detailed in the "Methodology" section of this Report;
- The study area was surveyed in March which is a suboptimal time of year to survey for threatened annual species such as orchids or lilies. As such, it is possible that some annual species may occur on site but were not recorded during the survey due to seasonality issues; and
- The site was surveyed for botanical species and fauna habitat values. As such targeted searches for threatened fauna were excluded from the scope of work and assessments are based on identified habitat values.

The opinions, conclusions and any recommendations in this Report are based on assumptions made by GHD when undertaking services and preparing the Report ("Assumptions"), including (but not limited to):

- Information from database searches is assumed to be correct; and
- Information on the proposed development was provided by the client and is assumed to be correct.

GHD expressly disclaims responsibility for any error in, or omission from, this Report arising from or in connection with any of the Assumptions being incorrect.

Subject to the paragraphs in this section of the Report, the opinions, conclusions and any recommendations in this Report are based on conditions encountered and information reviewed at the time of preparation and may be relied on until 6 months, after which time, GHD expressly disclaims responsibility for any error in, or omission from, this Report arising from or in connection with those opinions, conclusions and any recommendations.

## 1. Introduction

This report outlines the results of a botanical survey and fauna habitat assessment undertaken by GHD for Kreglinger Australia Pty Ltd (Kreglinger) on 1 March 2012.

The survey was conducted as part of a development proposal for a new entrance to the Mount Pleasant heritage property and residential sub-division of adjoining land. The site is located at 123 Westbury Road, Launceston, as shown in Figure 1.

The purpose of this assessment was to identify any threatened ecological values across the site, and to make recommendations to minimise potential impacts on identified ecological values.

## 2. Methodology

### 2.1 Background Research

A desktop assessment of the study area was undertaken to identify threatened ecological values that have been previously recorded. The desktop assessment also identifies threatened species that are predicted to occur on the site, based on their estimated geographic range.

The primary data sources accessed during the background research include:

- ▶ Natural Values Atlas<sup>1</sup> (BCB 2011) - which provides a natural values report that identifies threatened fauna and flora records within 500 m and 5000 m of the centre of the study area;
- ▶ Tasmania's Threatened Fauna Handbook<sup>2</sup> (Bryant & Jackson 1999) - which was consulted for threatened species recorded from the Prospect sheet (Tasmap 5040, Tasmania 1:25,000 series);
- ▶ The Environment Protection and Biodiversity Conservation Act 1999 (EPBCA) 'Protected Matters Search Tool'<sup>3</sup> (Commonwealth Government 2011) – which provides a report that identifies any matters listed under the EPBCA within a 5 km buffer around the study area; and
- ▶ The LIST information database<sup>4</sup> (Service Tasmania 2011) - which provides information on the location of vegetation communities according to the TASVEG 2005 and NRM Coastal Values Project 2006 mapping data, including the location of threatened vegetation.

### 2.2 Field Assessment

A GHD Senior Botanist conducted a botanical survey and fauna habitat assessment of the site on 1 March 2012, accompanied by a GHD Environmental Scientist. The study area is shown in Figure 1.

The study area was surveyed on foot, noting and collecting plant species as needed; plant species, fauna habitat values and native vegetation communities and weed infestations were recorded.

### 2.3 Statement of Compliance

Plant species were collected in accordance with the Department of Primary Industries, Parks, Water and Environment's Plant Collection Permit Number TFL 11119 (expiry: 30/06/2012).

All plants were identified in accordance with the *Census of Vascular Plants of Tasmania*<sup>5</sup> (Baker and Duretto 2011). Flora and fauna conservation significance was determined in accordance with the Tasmanian Threatened Species Protection Act 1995 (TSPA) and the Commonwealth Environment

<sup>1</sup> Biodiversity Conservation Branch (cited as BCB), 2011: Natural Values Atlas. Department of Primary Industries, Parks, Water and Environment (DPIPWE). Available online at: <https://www.naturalvaluesatlas.tas.gov.au> (accessed 5<sup>th</sup> March 2012).

<sup>3</sup> Commonwealth Government, 2011: Protected Matters Search Tool. Department of the Environment, Water, Heritage and the Arts. Available online at: <http://www.environment.gov.au> (accessed 3<sup>rd</sup> February 2012).

<sup>4</sup> Service Tasmania, 2011: The Land Information System Tasmania (LIST). DPIPWE. Available online at: <http://www.thelist.tas.gov.au/> (accessed 3<sup>rd</sup> February 2012).

<sup>5</sup> Baker, M.L. and Duretto, M.F., (Eds.), 2011: A Census of the Vascular Plants of Tasmania. Tasmanian Herbarium, Tasmanian Museum & Art Gallery, Hobart. Available online at: <http://tmag.tas.gov.au/file.aspx?id=4439> (accessed 3<sup>rd</sup> February 2012).

*Protection and Biodiversity Conservation Act 1999 (EPBCA). Weeds of significance were identified using the weeds index (DPIPWE) and Weeds of the South East: An Identification Guide for Australia (Richardson et al. 2007)<sup>6</sup>.*

Conservation significance of vegetation communities was assessed in accordance with the TASVEG 2005 and Regional Forestry Agreement (RFA) classification and associated criteria.

## 3. Botanical Values

### 3.1 Desktop Review of Threatened Flora

The Natural Values Report identified three threatened plant species listed under the TSPA and EPBC that have been previously been recorded within 500 metres of the study area. A large number of additional plant species previously recorded within 5 km of the study area were also identified.

Many of the threatened plants identified within 5 km of the study site were previously found within the aquatic and wet habitats provided by the Cataract Gorge and, given their habitat requirements are considered highly unlikely to occur within the study area.

These species and their likelihood of occurrence at the site are listed in Table 1.

**Table 1 Threatened flora previously recorded in, or within 5 km, of the study area**

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Alternanthera denticulata</i> Lesser joyweed	Endangered	Not Listed	Mainly occurs in heathland, sometimes found in open forest. <b>Highly Unlikely, not observed during site visit which coincided with the known flowering time for this species.</b>
<i>Anogramma leptophylla</i> annual fern	Vulnerable	Not listed	Occurs in shallow soil layers over rock, on exposed or semi-exposed outcrops in dry or damp sclerophyll forest. <b>Highly Unlikely, not observed during site visit with last recorded sighting within 5 km of the site in 1876.</b>
<i>Aphelia gracilis</i> slender fanwort	Rare	Not listed	Occurs in damp, sandy ground and wet places including tea-tree heath and swamp scrub. <b>Highly unlikely, no suitable habitat observed within the study area.</b>
<i>Arthropodium strictum</i> chocolate lily	Rare	Not listed	Found in open forest, dry hillsides and grasslands. This species occurs predominantly in the eastern half of the State. <b>Present.</b>
<i>Asperula subsimplex</i> water woodruff	Rare	Not listed	In Tasmania, <i>Asperula subsimplex</i> inhabits damp areas, marshy places and riverbanks (Curtis 1963). <b>Highly unlikely, no suitable habitat observed within the study area.</b>
<i>Austrodanthonia induta</i> tall wallaby grass	Rare	Not listed	Occurs on mudstone and dolerite in open, dry sclerophyll woodlands the Midlands, Southeast and East Coast of the State. <b>Possible, suitable habitat exists within the study area; however not recorded during the survey despite overlapping with known flowering time.</b>
<i>Bolboschoenus caldwellii</i> sea clubssedge	Rare	Not listed	Occurs in shallow, standing and sometimes brackish water, rooted heavily in black mud (Curtis and Morris 1994). <b>Highly unlikely, no suitable habitat observed within the study area.</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Boronia gunnii</i> river boronia	Vulnerable	Vulnerable	The species is strictly riparian in habitat, occurring in the flood zone of the rivers, in rock crevices or in the shelter of dolerite boulders.  <b>Highly unlikely, no suitable habitat observed within the study area.</b>
<i>Brunonia australis</i> blue pincushion	Rare	Not listed	Occurs in dry sclerophyll forests dominated by <i>Eucalyptus amygdalina</i> , or less commonly <i>E. viminalis</i> or <i>E. obliqua</i> and persistent in disturbed sites such as roadside cuttings.  <b>Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Caesia calliantha</i> blue grasslily	Rare	Not listed	Found predominantly throughout the Midlands in grassland or grassy woodland habitat and has also been recorded from grassy roadsides.  <b>Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Caladenia patersonii</i> patersons spider-orchid	Vulnerable	Not listed	Occurs in low shrubby and sedgy heath in moist to well-drained sand and clay loams (Jones <i>et al.</i> 1999). Usually associated with recent fire events.  <b>Possible, suitable habitat exists within the study area. The survey was conducted outside of the known flowering time (Sept-Nov).</b>
<i>Callitris oblonga</i> subs. <i>oblonga</i> south esk pine	Vulnerable	Endangered	Restricted to riparian scrub and woodland in areas with low precipitation and usually sandy soil.  <b>Highly unlikely, no suitable habitat found within the study area.</b>
<i>Calocephalus lacteus</i> milky beautyheads	Rare	Not listed	Occurs in open grassland situations.  <b>Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Calystegia sepium</i> swamp bindweed	Rare	Not listed	Found on riverbanks and the margins of forests in the north of the State around the Tamar region.  <b>Highly unlikely, as no suitable habitat identified within the study area.</b>
<i>Carex longibrachiata</i> drooping sedge	Rare	Not listed	Occurs along river banks, in rough grassland and pastures.  <b>Unlikely, suitable habitat exists within the study area. However, none observed during survey.</b>
<i>Carex tasmanica</i> curly sedge	Not listed	Vulnerable	Occurs in soaks and seepage lines in a range of grassy woodland communities.  <b>Highly unlikely, no suitable habitat observed within study area.</b>
<i>Centipeda cunninghamii</i> erect sneezeweed	Rare	Not listed	Occurs in low soaks adjacent to rivers. Found in a wide variety of soil types usually in areas subject to flooding or where water is stagnant.  <b>Highly unlikely, no suitable habitat observed within the study area.</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Corunastylis nuda</i> tiny midge-orchid	Rare	Not listed	Found in scrub, alpine scrub, and heathy, open eucalypt forest.  <b>Possible, suitable habitat exists within the study area. However none observed during survey despite overlap with known flowering times.</b>
<i>Cryptandra amara</i> pretty pearlflower	Endangered	Not listed	Rocky habitats, including riverine rock plates, native grasslands dominated by <i>Themeda triandra</i> , <i>Bursaria spinosa</i> , grassy <i>Eucalyptus rubida</i> woodland, and heathy <i>Eucalyptus amygdalina</i> forests. Usually found on dolerite or basalt, though occurrences on mudstone and laterite.  <b>Highly unlikely, suitable habitat exists within the study area. None observed during survey despite overlap with known flowering times.</b>
<i>Cynoglossum australe</i> coast houndstongue	Rare	Not listed	Occurs in grasslands, open forests and landward margins of coastal sand dunes.  <b>Unlikely, suitable habitat exists within the study area. None observed during survey despite overlap with known flowering times.</b>
<i>Damasonium minus</i> Star fruit	Rare	Not listed	Occurs in swampy habitat and farm dams and prefers slow flowing or stationary water.  <b>Highly unlikely, no suitable habitat observed within the study area.</b>
<i>Discaria pubescens</i> Spiky anchorplant	Endangered	Not listed	Occurs on grassy banks/roadsides, sandy or gravelly soil in basalt talus slopes and clefts amongst fractured dolerite rocks and flood channels.  <b>Highly unlikely, no suitable habitat observed within the study area.</b>
<i>Diuris palustris</i> Swamp doubletail	Endangered	Not listed	Found in grassy open eucalypt forest, sedgy grassland and heathland with tea-tree and paperbark on poorly to moderately drained sandy peat and loams, usually in sites that are wet in winter.  <b>Unlikely, last recorded sighting within 5 km of the study site was 1946.</b>
<i>Doodia caudata</i> small raspfern	Endangered	Not listed	A riparian species that grows in rich moist soil amongst boulders and along the shaded banks of streams, or in the crevices of rock outcrops.  <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Epacris exserta</i> south esk heath	Endangered	Pending endangered	Occurs on lower slopes and swamp edges in dry scrub/dry sclerophyll forest between 10-575 m above sea level and on the banks of several rivers.  <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Epilobium pallidiflorum</i> showy willowherb	Rare	Not listed	Occurs in wet habitats such as riparian areas and wet herb fields.  <b>Highly unlikely, no suitable habitat within the study area.</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Euphrasia scabra</i> yellow eyebright	Endangered	Not listed	Occurs in moist herb/sedge communities, grassy areas of marshes, or open grassy areas at the headwaters of creeks. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Gratiola pubescens</i> hairy brooklime	Vulnerable	Not listed	Most commonly located in permanently or seasonally damp, swampy ground. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Gyrostemon</i> <i>Thesioides</i> broom wheelfruit	Rare	Not listed	Occurs predominately in <i>Allocasuarina</i> forest in the north and east of the State. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Haloragis heterophylla</i> variable raspwort	Rare	Not listed	Occurs within <i>Themeda</i> grassland, roadsides. <b>Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Hovea tasmanica</i> rockfield purplepea	Rare	Not listed	Found on dry, rocky ridges or slopes (mostly dolerite) in forest and riverine scrub. <b>Unlikely, no suitable habitat on site, and not identified during survey.</b>
<i>Hypolepis muelleri</i> harsh groundfern	Rare	Not listed	This species inhabits sites along watercourses or deep, rich, alluvial soils below 120 m altitude. <b>Highly unlikely as no suitable habitat within the study area.</b>
<i>Hypoxis vaginalata</i> Sheathing yellowstar	Rare	Not listed	Occurs in unimproved pasture and swamp/poorly drained areas. <b>Unlikely, no suitable habitat within the study area.</b>
<i>Hypoxis vaginalata</i> var. <i>brevistigmata</i> Sheathing yellowstar	Pending rare	Not listed	Occurs in unimproved pasture and swamp/poorly drained areas (Lazarus et al. 2003). <b>Unlikely, no suitable habitat within the study area.</b>
<i>Isoetes elatior</i> tall quillwort	Rare	Not listed	Occurs at low altitude with its roots in gravel or silt substrate in moderate to swiftly flowing waters. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Juncus amabilis</i> gentle rush	Rare	Not listed	Occurs in moist situations, generally areas of seepage confined to roadsides. <b>Unlikely, no suitable habitat within the study area.</b>
<i>Lepidium</i> <i>pseudotasmanticum</i> shade peppercress	Rare	Not listed	Found on bare ground in grassland and grassy woodland in the south with scattered populations extending up the midlands to Punchbowl in the north. <b>Unlikely, none observed on site despite overlap with known flowering time.</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Lycopus australis</i> australian gypsywort	Endangered	Not listed	Occurs in lacustrine hermland, disturbed areas within <i>Melaleuca ericifolia</i> swamp forest, <i>Phragmites australis</i> reed beds, and rocky (dolerite) riverbeds fringed by riparian scrub. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Lythrum salicaria</i> purple loosestrife	Vulnerable	Not listed	Occurs in swamps, stream banks and canopy gaps within <i>Melaleuca ericifolia</i> swamp forest. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Mentha australis</i> river mint	Endangered	Not listed	In Tasmania, <i>Mentha australis</i> has been observed growing along the rocky (dolerite) margins of rivers and lakes. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Myriophyllum integrifolium</i> tiny watermilfoil	Vulnerable	Not listed	Found in muddy soil, saline swamps and on the edge of wetlands in the Midlands and in the north, north-east and south of the State. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Parietaria debilis</i> shade pellitory	Rare	Not listed	Occurs around mutton bird rookeries, on cliffs/rocks in salt spray zone and on grazed pasture/grassland. <b>Possible, suitable habitat exists within the study site. Survey was undertaken outside of known flowering time (Aug-Nov).</b>
<i>Persicaria decipiens</i> slender waterpepper	Vulnerable	Not listed	Occurs on the banks of rivers and streams, most frequent in the north of the State. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Persicaria subsessilis</i> bristly waterpepper	Endangered	Not listed	Occurs on rocky river margins, forest and lagoon margins and within openings in riparian scrub on alluvium. <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Poa mollis</i> soft tussockgrass	Rare	Not listed	Occurs on dry open hillsides and cliffs, predominantly in the east of the State. <b>Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Prostanthera cuneata</i> alpine mintbush	Presumed extinct	Not listed	In Victoria occurs on well drained, moist conditions. Presumed extinct in Tasmania. <b>Highly Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Prostanthera rotundifolia</i> roundleaf mintbush	Vulnerable	Not listed	Woody shrub occurs in the north and east of the State, along riverbanks and on rocky hillsides. <b>Highly Unlikely, none observed on site despite overlap with known flowering time.</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Pterostylis grandiflora</i> Superb greenhood	Rare	Not listed	Occurs in heathy and shrubby open eucalypt forests and in grassy coastal she-oak woodland on moderately to well drained sandy and loamy soils.  <b>Possible, survey undertaken outside of known flowering times (Apr-Aug).</b>
<i>Pterostylis ziegeleri</i> grassland greenhood	Vulnerable	Vulnerable	Occurs in coastal areas on the slopes of low stabilised sand dunes and in grassy dune swales In the Midlands it grows in native grassland or grassy woodland on well-drained clay loams derived from basalt.  <b>Possible, survey undertaken outside of known flowering time (Sept-Dec).</b>
<i>Pultenaea prostrata</i> Silky bushpea	Vulnerable	Not listed	Occurs in sandy, inland soil in grassy woodland and grassland.  <b>Unlikely, as not observed during survey and survey conducted near known flowering time.</b>
<i>Ranunculus sessiliflorus</i> var. <i>sessiliflorus</i> Rockplate buttercup	Rare	Not listed	Occurs in grassland and grassy woodland.  <b>Possible, suitable habitat exists within the study area, survey undertaken outside of flowering time (Sept-Dec).</b>
<i>Schenkia australis</i> spike centaury	Rare	Not listed	Occurs in cleared forest pasture, rainforest/wet sclerophyll forest and heathland in the east and north of the State.  <b>Unlikely, as not observed during survey and survey conducted near known flowering time.</b>
<i>Schoenoplectus tabernaemontani</i> river clubsedge	Rare	Not listed	Occurs on margins of lagoons on King Island, Flinders Island and on some riverbanks in the Midlands.  <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Scutellaria humilis</i> dwarf skullcap	Rare	Not listed	Occurs in moist, shady areas.  <b>Unlikely, none observed on site despite overlap with known flowering time.</b>
<i>Senecio macrocarpus</i> largefruit fireweed	Presumed extinct	Vulnerable	The only Tasmanian locality  Information for <i>Senecio macrocarpus</i> available is 'northern Tasmania'.  <b>Unlikely, not observed during site visit and presumed extinct in Tasmania. Last sited around 1800.</b>
<i>Senecio squarrosus</i> leafy fireweed	Rare	Not listed	Found in dry sclerophyll forest.  <b>Possible, suitable habitat onsite and has been found within 5 km. Survey conducted outside of known flowering time (Oct-Dec).</b>
<i>Siloxerus multiflorus</i> small wrinklewort	Rare	Not listed	Predominantly found in the north and north-east of the State, on rocks at river mouths, in coastal areas and inland dry forests.  <b>Possible, suitable habitat onsite and has been found within 5 km. Survey conducted outside of known flowering time (Sept-Oct).</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Spyridium eriocephalum</i> var. <i>eriocephalum</i> heath dustymiller	Endangered	Not listed	Occurs in dry shrublands and eucalypt woodlands. Known from a single extant population near Hobart with other populations in the north of the state considered locally extinct.  <b>Highly Unlikely, not observed near the study area since 1880.</b>
<i>Spyridium vexilliferum</i> var. <i>vexilliferum</i> helicopter bush	Rare	Not listed	Found in sandy heaths and on rocky outcrops in the east, north and west of Tasmania.  <b>Highly Unlikely, no suitable habitat observed within the study area and species not observed onsite.</b>
<i>Tetratheca ciliata</i> northern pinkbells	Rare	Not listed	Occurs in coastal heath and heathy woodland.  <b>Unlikely, suitable habitat within the study area however none observed during survey.</b>
<i>Teucrium Corymbosum</i> forest germander	Rare	Not listed	Predominantly found in <i>Allocasuarina verticillata</i> coastal and inland woodland, <i>Eucalyptus viminalis</i> woodland and native grasslands in the east of the state.  <b>Highly Unlikely, not observed onsite with survey overlapping known flowering times.</b>
<i>Triptilodiscus pygmaeus</i> dwarf sunray	Vulnerable	Not listed	Occurs within grasslands, grassy woodlands or rockplates, the underlying substrate being mostly Tertiary basalt or Jurassic dolerite. The species occurs within native grassland dominated by <i>Themeda triandra</i> .  <b>Possible, suitable habitat onsite and has been found within 5 km. Survey conducted outside of known flowering time (Sept-Nov).</b>
<i>Utricularia australis</i> yellow bladderwort	Rare	Not listed	Occurs in marshy habitat in stationary or slow flowing water up to several meters deep.  <b>Highly unlikely, no suitable habitat observed onsite.</b>
<i>Velleia paradoxa</i> spur velleia	Vulnerable	Not listed	Occurs in grassland and grassy woodland.  <b>Unlikely, not observed onsite with survey near known flowering times.</b>
<i>Veronica plebeia</i> trailing speedwell	Rare	Not listed	Occurs in wet sclerophyll forest.  <b>Highly unlikely, no suitable habitat within the study area.</b>
<i>Viola caleyana</i> swamp violet	Rare	Not listed	Occurs in dry sclerophyll forest in the north and north-east of the State.  <b>Possible, suitable habitat within the study area and has been found within 5 km. Survey conducted outside of known flowering time (Nov-Jan).</b>
<i>Viola cunninghamii</i> alpine violet	Rare	Not listed	This species has a wide range and is usually confined to moist sites below alpine areas.  <b>Unlikely, as not observed during survey and survey conducted near known flowering time.</b>
<i>Vittadinia gracilis</i> woolly new-holland-daisy	Rare	Not listed	Occurs on dry sites on dolerite and basalt. It is predominantly found in dry sclerophyll forest.  <b>Unlikely, as not observed during survey and survey conducted near known flowering time.</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Westringia angustifolia</i> narrowleaf westringia	Rare	Not listed	Found predominantly in dry, shrubby understorey, often on dolerite and associated with other endemic species from 300 to 900 metres, and riverbanks.  <b>Unlikely, suitable habitat within the study area however none observed during survey.</b>
<i>Xerochrysum bicolor</i> eastcoast everlasting	Rare	Not listed	In Tasmania, this species is recorded from heathland near the coast in the north-east, and in alpine situations.  <b>Unlikely, as not observed during survey and survey conducted during known flowering time.</b>

**Note: Likelihood of occurrence of threatened flora is assessed on a 4-tier scale:**

**Present** - individuals recorded within the study area during the field assessment or any previous assessment within the boundaries of study area;

**Possible** - suitable habitat occurs within the study area;

**Unlikely** - suitable habitat unlikely to occur within the study area, or suitable habitat substantially modified, or suitable habitat present but species not recorded for over 50 years within 5 km of the site;

**Highly unlikely** - no suitable habitat present within the study area, and individuals not recorded within the study area during current or any previous assessment.

### 3.2 Flora Species Recorded within the Study Area

While suitable habitat for a number of threatened plant species listed within Table 1 exists within the site, only one threatened flora species was recorded during the field survey. This species was *Arthropodium strictum* (chocolate lily) which is listed as rare in Tasmania.

Up to 5 individuals of *A. strictum* were recorded within the high quality area of native vegetation (marked as 'DAZ' in Figure 1) in the northeast corner of the site.

Habitat suitable for a number of additional threatened species identified within Table 1 exists within the study area. This survey was conducted during early March, overlapping with flowering times for a number of these species; however, some species have known flowering times which do not coincide with the timing of this survey. Without conducting a site visit during their known flowering time (generally spring), it cannot be determined whether they are present or absent within the study area.

If additional threatened flora species were to occur, they would most likely be restricted to areas mapped as DAZ.

Species lists (native and introduced species) for the study area are provided below.

#### Native species

- ▶ *Acacia dealbata* subsp. *dealbata* (silver wattle)
- ▶ *Acacia mearnsii* (black wattle)
- ▶ *Acacia melanoxylon* (blackwood)
- ▶ *Acacia mucronata* subs. *longifolia* (longleaf caterpillar wattle)
- ▶ *Acaena novae-zelandiae* (common buzzy)
- ▶ *Allocasuarina littoralis* (black sheoak)

- ▶ *Arthropodium strictum* (chocolate lily) (**threatened**)
- ▶ *Astroloma humifusum* (native cranberry)
- ▶ *Austrodanthonia tenuior* (purplish wallabygrass)
- ▶ *Rytidosperma dimidiatum* (variable wallaby grass)
- ▶ *Austrodanthonia caespitosa* (common wallabygrass)
- ▶ *Austrostipa sp.*
- ▶ *Banksia marginata* (silver banksia)
- ▶ *Beyeria viscosa* (pinkwood)
- ▶ *Billardiera mutabilis* (green appleberry)
- ▶ *Bursaria spinosa* (prickly box)
- ▶ *Carex breviculmis* (shortstem sedge)
- ▶ *Dianella revoluta* (spreading flaxlily)
- ▶ *Dodonaea viscosa* subsp. *spatulata* (broadleaf hopbush)
- ▶ *Epacris impressa* (common heath)
- ▶ *Epacris obtusifolia* (bluntnleaf heath)
- ▶ *Eucalyptus amygdalina* (black peppermint)
- ▶ *Eucalyptus viminalis* subsp. *viminalis* (white gum)
- ▶ *Exocarpos cupressiformis* (common native-cherry)
- ▶ *Gahnia radula* (thatch sawsedge)
- ▶ *Gonocarpus tetragynus* (common raspwort)
- ▶ *Hibbertia hirsuta* (hairy guineaflower)
- ▶ *Lepidosperma laterale* (variable sword-sedge)
- ▶ *Lomandra longifolia* (sagg)
- ▶ *Luzula meridionalis*
- ▶ *Kennedia prostrata* (running postman)
- ▶ *Microlaena stipoides*
- ▶ *Microtis sp.*
- ▶ *Oxalis sp.*
- ▶ *Pimelea humilis* (dwarf riceflower)
- ▶ *Platylobium triangulare* (arrow flatpea)
- ▶ *Thelymitra sp.*
- ▶ *Themeda triandra* (kangaroo grass)

#### ***Introduced species***

- ▶ *Aesculus hippocastanum* (horse chestnut)
- ▶ *Agapanthus praecox* (agapanthus)
- ▶ *Agrostis capillaris* (browntop bent)
- ▶ *Aira sp.*
- ▶ *Amaryllis belladonna* (belladonna lily)
- ▶ *Anagallis arvensis* (scarlet pimpernel)
- ▶ *Anthoxanthum odoratum* (sweet vernal grass)
- ▶ *Arctotheca calendula* (capeweed)
- ▶ *Arrhenatherum elatius* var. *bulbosum* (bulbous wheatgrass)
- ▶ *Betula pendula* (silver birch)
- ▶ *Briza maxima* (greater quaking grass)
- ▶ *Bromus diandrus* (great brome)
- ▶ *Bromus willdenowii* (prairie grass)
- ▶ *Cerastium fontanum* (mouse ear)
- ▶ *Chrysanthemoides monilifera* subs. *Monilifera* (boneseed)
- ▶ *Cirsium vulgare* (spear thistle)
- ▶ *Coprosma repens* (mirrorbush)
- ▶ *Cotoneaster glaucophyllus* (largeleaf cotoneaster)
- ▶ *Crataegus monogyna* (hawthorn)
- ▶ *Cynosurus echinatus* (rough dogstail)

- ▶ *Fraxinus sp.* (ash)
- ▶ *Gamochaeta calviceps* (grey cudweed)
- ▶ *Gazania linearis* (tufted gazania)
- ▶ *Genista monspessulana* (canary broom)
- ▶ *Hebe elliptica* (shore hebe)
- ▶ *Holcus lanatus* (yorkshire fog)
- ▶ *Hypochoeris radicata* (rough catsear)
- ▶ *Ilex aquifolium* (holly)
- ▶ *Lactuca serriola* (prickly lettuce)
- ▶ *Leontodon taraxacoides* (hairy hawkbit)
- ▶ *Malva parviflora* (smallflower mallow)
- ▶ *Osteospermum fruticosum* (trailing daisy)
- ▶ *Paspalum dilatatum* (paspalum)
- ▶ *Pennisetum clandestinum* (kikuyu)
- ▶ *Picea albies* (norwegian Spruce)
- ▶ *Picea pungens* (blue spruce)
- ▶ *Pinus ponderosa* (ponderosa pine)
- ▶ *Pinus pinaster*
- ▶ *Pinus radiata* (radiata pine)
- ▶ *Pittosporum undulatum* (sweet pittosporum)
- ▶ *Plantago lanceolata* (ribwort plantain)
- ▶ *Polygonum arenastrum* (small wireweed)
- ▶ *Prunus sp.*
- ▶ *Quercus sp.* (oak)
- ▶ *Raphanus raphanistrum* (wild radish)
- ▶ *Rhododendron ponticum* (rhododendron)
- ▶ *Rubus fruticosus* (blackberry)
- ▶ *Rumex sp.*
- ▶ *Sequoia sempervirens* (redwood).
- ▶ *Solanum nigrum* (blackberry nightshade)
- ▶ *Sollya heterophylla* (bluebell creeper)
- ▶ *Sonchus oleraceus* (common sowthistle)
- ▶ *Taraxacum officinale* (common dandelion)
- ▶ *Tradescantia albiflora* (wandering creeper)
- ▶ *Ulex europaeus* (gorse)
- ▶ *Ulmus sp.* (Elm)
- ▶ *Vicia sativa* subs. *nigra* (narrowleaf vetch)

### 3.3 Introduced Plants

A number of common planted trees and garden species were identified within the study area. Any cultural heritage values such as heritage listing on large trees are beyond the scope of this report.

A number of species listed as declared weeds under the Tasmanian *Weed Management Act 1999*, have been recorded previously within 5 km of the study area/s.

Declared weed species observed during the field inspection include:

- ▶ *Rubus fruticosus* (blackberry);
- ▶ *Genista monspessulana* (canary broom);
- ▶ *Chrysanthemoides monilifera* subs. *monilifera* (boneseed); and
- ▶ *Ulex europaeus* (gorse).

### 3.4 Vegetation Communities

A number of vegetation communities were identified within the study area during the field survey. These communities are briefly described below as defined by the document, *From Forest to Fjeldmark: Descriptions of Tasmania's Vegetation*<sup>7</sup> (Harris & Kitchener 2005).

#### ***Agricultural land (FAG).***

This vegetation community generally contains exotic temperate grass mixes and clovers.

Within the study area this community (Plate 1) was dominated by introduced grasses *Dactylis glomerata* and *Bromus willdenowii*. A variety of other exotic species were present within this community including a number of scattered planted garden tree species.

<sup>7</sup> Harris, S. & Kitchener, A. (2005): *From Forest to Fjeldmark: Descriptions of Tasmania's Vegetation*, Department of Primary Industries, Parks, Water and Environment, Printing Authority of Tasmania, Hobart.

**Plate 1      Cleared agricultural land dominated by introduced grasses (FAG). View of southern site boundary fence with adjoining vineyard**

***Plantations for silviculture (FPL)***

This community is characterised by monocultures of commercial tree species including *Pinus radiata*, *Eucalyptus globulus* and *Eucalyptus nitida*.

The area mapped as FPL within the study area does not fully match the description of FPL with regard to the non-commercial nature of the plantation and the plantation area not in a row formation. The FPL within the site comprises of large planted trees including *Pinus radiata* and *Pinus ponderosa* over a sparse understorey with prolific seedling regrowth (Plate 2).

**Plate 2      Planted *Pinus radiata* and *Pinus ponderosa* with sparse understorey and colonising seedlings**

***Eucalyptus amygdalina* inland forest and woodland on Cainozoic deposits (DAZ)**

DAZ is listed as a threatened vegetation community under the *Nature Conservation Act 2002*.

This vegetation comprises of dominant overstorey species *E. amygdalina*, *Eucalyptus viminalis*, *Eucalyptus pauciflora* and occasionally *Eucalyptus ovata*. The understorey of this community is comprised of dry sclerophyll shrubs, grasses and bracken (*Pteridium esculentum*).

Secondary trees and tall shrubs found within this community include *Allocasuarina littoralis*, *Acacia dealbata* and *Exocarpos cupressiformis*.

The study area contained a small area of DAZ toward the northeast corner and eastern site boundary (Figure 1) which was characterised by a canopy of *E. amygdalina* over *A. littoralis*, *E. cupressiformis*, *Themeda triandra*, *Austrodanthonia* sp. and *Lomandra longifolia* (Plate 3a).

A second area of DAZ was identified toward the centre of the study area (Figure 1). This area was identified as DAZ based on the presence of remnant *E. amygdalina* and *E. viminalis* trees, however, the understorey in this area was degraded and comprised of a mixture of exotic and native grasses (Plate 3b).

A third (very small) area was found toward the northwest corner of the study area. This small area was classified as DAZ as the patch did include a native ground cover of grasses, but did not include native eucalypts.

**Plate 3**    a) A narrow strip of the threatened vegetation community, *Eucalyptus amygdalina* inland forest and woodland on Cainozoic deposits in north east corner of the study area.  
             b) Remnant *E. amygdalina* and *E. viminalis* trees with a highly degraded understorey of introduced pasture species.

***FWU – Weed Infestation***

There was one area of weed infestation identified on the western boundary of the study area, comprised predominantly of gorse plants.

## 4. Zoological Values

### 4.1 Desktop Review of Threatened Fauna

According to the Natural Values Atlas Report, no threatened fauna have previously been recorded within 500 m of the study area/s; however numerous species have been recorded, or are predicted to occur, within 5 km of the site/s according to the Natural Values Atlas Report and the EPBCA Protected Matters Search Tool.

These species (except listed marine and migratory marine species) and their likelihood for occurrence within the study site/s are shown in Table 2 (also see Appendix A and Appendix B).

**Table 2 Threatened fauna known to occur or predicted to occur within 5 km of the study area**

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<b>Mammals</b>			
<i>Dasyurus maculatus</i> subsp. <i>maculatus</i>	Rare	Vulnerable	Most commonly inhabit cool temperate rainforest, wet sclerophyll forest, and coastal scrub.
spotted-tailed quoll			<b>Unlikely, limited suitable habitat within the study area.</b>
<i>Parameles gunnii</i>	Not listed	Vulnerable	Grassland and grassy woodland, also found in modified environments like pastures and semi-urban parks and gardens.
eastern barred bandicoot			<b>Possible, suitable habitat present within the study area.</b>
<i>Sarcophilus harrisii</i>	Endangered	Endangered	May occur in a variety of forest types including coastal heath, open dry sclerophyll forest, and mixed sclerophyll rainforest.
Tasmanian devil			<b>Unlikely, although previously recorded within 5 km of the site, this species is considered unlikely given the urban setting of the site.</b>
<i>Thylacinus cynocephalus</i>	Extinct	Extinct	<b>Highly unlikely. Presumed extinct.</b>
thylacine			
<b>Birds</b>			
<i>Accipiter novaehollandiae</i>	Endangered	Not Listed	Occurs in closed forests, with high priority nesting habitat along watercourses with blackwoods. May otherwise nest in melaleuca, myrtle, teatree and eucalypt species, occasionally up to 100 metres from a
grey goshawk			

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<i>Alcedo azurea</i> subsp. <i>diemenensis</i> azure kingfisher	Endangered	Endangered	watercourse. <b>Highly unlikely, no suitable habitat. Possible fly over area.</b>
<i>Aquila audax</i> subsp. <i>fleayi</i> wedge-tailed eagle	Endangered	Endangered	Inhabits thick vegetation surrounding freshwater rivers, lakes, billabongs and swamps. <b>Highly unlikely, no suitable habitat.</b>
<i>Botaurus poiciloptilus</i> Australasian bittern	Not Listed	Endangered	Nest in old growth trees, and common in areas with a mosaic of forest, farmland and waterways. <b>Unlikely to nest, and no nests recorded within the site, however possible overfly area.</b>
<i>Haliaeetus leucogaster</i> white-bellied sea-eagle	Vulnerable	Migratory	Mainly occurs in densely vegetated freshwater wetlands and, rarely, in estuaries or tidal wetlands. Formerly widespread in Tasmania, now appears confined to coastal regions in the northeast and on the Bass Strait islands. <b>Highly unlikely, no suitable habitat. Possible fly over area.</b>
<i>Lathamus discolor</i> swift parrot	Endangered	Endangered	Generally nest and forage near the coast; however, also occur near large rivers and inland lakes. Require old growth trees for nesting. <b>Highly unlikely, no suitable habitat. Possible fly over area.</b>
<i>Tyto novaehollandiae</i> subsp. <i>castanops</i> masked owl (Tasmanian)	Endangered	Vulnerable	Feed on the nectar of <i>Eucalyptus globulus</i> and <i>E. ovata</i> . Nest in tree hollows in eastern Tasmania, usually near the coast in dry forests. <b>Unlikely, although recorded within 5 km of the site, no feeding trees were observed. Possible fly over area.</b>
			Usually found in lowland dry sclerophyll forest; however, can occur in wet sclerophyll forest, non-eucalypt dominated forest, scrub and urban environments. <b>Unlikely. Although some suitable habitat exists, the fragmented nature and urban surrounds limit the potential value of the site for this species. No evidence of this species found during the field</b>

Species	Tasmanian TSPA Status	Commonwealth EPBCA Status	Brief habitat description & Likelihood of occurrence within study area
<b>survey.</b>			
<b>Other</b>			
<i>Migas plomleyi</i> Plomleys trapdoor spider	Rare	Not listed	Found on the slopes surrounding First Basin, Cataract Gorge. <b>Unlikely, known from very localised area.</b>
<i>Pasmaditta jungermanniae</i> jungermans snail (Cataract Gorge)			
	Vulnerable	Not listed	Previously identified in moss just above the waterline in Cataract Gorge. <b>Highly unlikely, no suitable habitat</b>
<i>Beddomeia launcestonensis</i> Hydrobiid snail	Endangered	Not listed	<b>Highly unlikely, no aquatic habitat</b>
<i>Litoria reniformis</i> green and gold frog			
	Vulnerable	Vulnerable	Inhabit permanent or temporary water bodies usually dominated by reed and sedge species. <b>Highly unlikely, no suitable habitat</b>
<i>Pseudemoia rawlinsoni</i> Glossy grass skink	Rare	Not listed	<ol style="list-style-type: none"> <li>1. Lives amongst rushy grasses and low dense vegetation in moist situations along the margins of swamps and watercourses.</li> <li>2. <b>Highly unlikely, no suitable habitat</b></li> </ol>
<i>Prototroctes maraena</i> Australian grayling			
	Vulnerable	Vulnerable	<b>Highly unlikely, no aquatic habitat</b>
<i>Galaxias fontanus</i> swan galaxias			
	Endangered	Endangered	<b>Highly unlikely, no aquatic habitat</b>
<i>Galaxiella pusilla</i> Eastern dwarf galaxias			
	Vulnerable	Vulnerable	<b>Highly unlikely, no aquatic habitat</b>

**Note: Likelihood of occurrence of threatened flora is assessed on a 4-tier scale:**

**Present** - individuals recorded within the study area during the field assessment or any previous assessment within the boundaries of study area;

**Possible** - suitable habitat occurs within the study area;

**Unlikely** - suitable habitat unlikely to occur within the study area, or suitable habitat substantially modified, or suitable habitat present but species not recorded for over 50 years within 5 km of the site;

**Highly unlikely** - no suitable habitat present within the study area, and individuals not recorded within the study area during current or any previous assessment.

## 4.2 Fauna Habitat within the Study Area

Very few fauna species were observed during the field assessments, with an Australian magpie (*Gymnorhina tibicen*) and superb blue-wren (*Malurus cyaneus*) observed during the field survey and a brushtail possum (*Trichosurus vulpecula*) scat noted.

Potential fauna habitat was recorded within the DAZ vegetation community. These areas are shown on Figure 1 and are located toward the centre and northeast corner of the site and included a number of large *Eucalyptus viminalis* trees, one of which was hollow bearing (Plate 4).

**Plate 4 Large Hollow bearing *E. viminalis* tree within the study area**

There were no potential burrows and/or den sites or animal tracks/scratchings observed during the field assessments. The habitat tree and vegetation communities within the study area provide potential habitat for some of those threatened species previously identified in Table 2, as follows:

- ▶ **Eastern barred bandicoot (*Pameles gunni*):** no potential burrow sites or nose cones were recorded during the field assessment and, although this species may be utilising more open areas of the site for foraging and movement across the landscape, it is considered unlikely that this site would provide critical habitat for the species.
- ▶ **Tasmanian devil (*Sarcophilus harrisii*):** Whilst the habitat types suggests that the species may occur, given the semi-urban setting it is considered unlikely to utilise the site. No evidence of this species presence was recorded during the field assessment.

- ▶ **Wedge-tailed eagle (*Aquila audax* subsp. *fleayi*):** No nests were recorded on the site, although one nest has previously been recorded within 5km. Given the urban semi-urban setting of the site, it is unlikely to provide critical habitat for this species.
- ▶ **Tasmanian masked owl (*Tyto novaehollandiae* subsp. *castanops*):** One large hollow bearing tree was present within the study area. This species nests within hollow bearing trees, however, given the semi-urban setting of the site, it is unlikely that the site provides optimal habitat for this species. Whilst there is limited potential for this species to occur within the study area, no evidence of this species presence was noted during the field survey.

## 5. Conclusions and Recommendations

### **Threatened Flora**

*Arthropodium strictum* was found within the DAZ vegetation community, toward the NE corner of the site. This species is protected under Tasmania's *Threatened Species Protection Act 1995* and cannot be destroyed or removed without first obtaining a permit from the Department of Primary Industries, Parks, Water and the Environment (DPIPWE).

Despite *A. strictum* being the only threatened plant species identified during the field survey, it is possible that additional threatened species listed in Table 1 are present on site but were not flowering at the time the survey was conducted (particularly in the higher quality patches of DAZ). Follow up surveys may be required if impacts to the DAZ community are expected.

### **Weeds**

Any development at the site should apply appropriate controls to limit the spread of existing weeds on site, and avoid the introduction of new species. Such weed control measures should be documented and adhere to the *Tasmanian Washdown Guidelines for Weed and Disease Control*<sup>8</sup> (DPIPWE 2004) and the DPIPWE Weed Control Fact Sheets.

### **Vegetation Communities**

The vegetation communities recorded across the majority of the site are not threatened, and are dominated by introduced planted and weed species. However, *Eucalyptus amygdalina* inland forest and woodland on Cainozoic deposits (DAZ) is considered a threatened vegetation community under the *Nature Conservation Act 2002* and is listed as 'vulnerable' under the *Regional Forest Agreement 1997*.

Two areas of higher quality DAZ (see Figure 1) were recorded in the NE and NW corners. The area toward the NW corner is very small, with no eucalypt canopy remaining. One additional area mapped as DAZ identified toward the centre of the site had a degraded understorey and has low value compared to the other two.

If possible, development on the site should avoid the threatened DAZ community, particularly the higher quality area in the north eastern corner. If clearance within these areas is expected a Forest Practices Plan issued by the Forest Practices Authority would normally be required prior to commencement. However, if a permit is issued by Council for the construction of buildings or associated developments, under the Land Use Planning and Approvals Act, the clearing would be exempt from the requirement of a FPP.

### **Threatened fauna habitat**

While the site is not expected to be providing optimal habitat for any of the threatened species listed in Section 4.2, it is considered possible that some of these species may utilise the higher quality areas mapped as DAZ and the large hollow bearing tree shown on the maps.

<sup>8</sup> Department of Primary Industries, Parks, Water and Environment (cited as DPIPWE), 2004: Tasmanian Washdown Guidelines for Weed and Disease Control. Edition 1. Forestry Tasmania, Agricultural Contractors, Nature Conservation Branch, Tasmania. Available online at: [http://www.dpiw.tas.gov.au/inter.nsf/Attachments/LJEM-5ZM43C/\\$FILE/Washdown%20Guidelines%20Edition%201.pdf](http://www.dpiw.tas.gov.au/inter.nsf/Attachments/LJEM-5ZM43C/$FILE/Washdown%20Guidelines%20Edition%201.pdf)

If possible, development on the site should avoid the areas mapped as DAZ (particularly in the north eastern corner) and the recorded hollow bearing tree (refer map). If impacts to these values are anticipated further investigations or approvals under the *Threatened Species Protection Act 1995* may be required.

It is not expected that approval/s under the Federal *Environment Protection and Biodiversity Conservation Act 1999* would be required for possible impacts to fauna values, as the site provides only marginal habitat for the identified species, the clearance of which is unlikely to trigger the significant impact criteria under the Act.

## Appendix B

# EPBCA Protected Matters Report

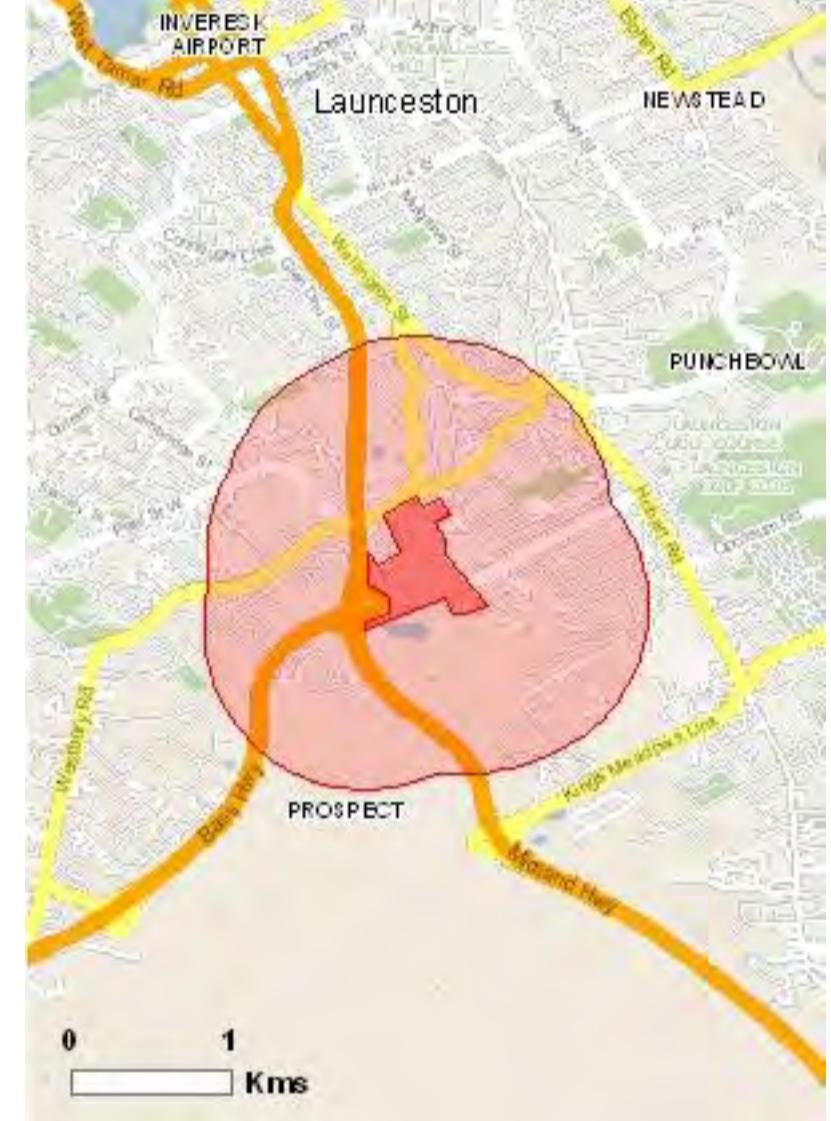

# EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

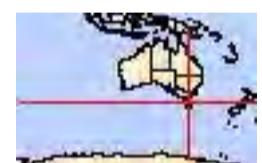

Information about the EPBC Act including significance guidelines, forms and application process details can be found at <http://www.environment.gov.au/epbc/assessmentsapprovals/index.html>

Report created: 05/03/12 11:20:49

This map may contain data which are

## Summary

### Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the Administrative Guidelines on Significance - see <http://www.environment.gov.au/epbc/assessmentsapprovals/guidelines/index.html>

<a href="#">World Heritage Properties:</a>	None
<a href="#">National Heritage Places:</a>	None
<a href="#">Wetlands of International</a>	None
<a href="#">Great Barrier Reef Marine Park:</a>	None
<a href="#">Commonwealth Marine Areas:</a>	None
<a href="#">Threatened Ecological Communities:</a>	None
<a href="#">Threatened Species:</a>	17
<a href="#">Migratory Species:</a>	9

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place and the heritage values of a place on the Register of the National Estate. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage/index.html>

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

A permit may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species. Information on EPBC Act permit requirements and application forms can be found at <http://www.environment.gov>.

## Details

### Matters of National Environmental Significance

Threatened Species	[ Resource Information ]	
Name	Status	Type of Presence
BIRDS		
<a href="#">Aquila audax fleayi</a>		
Wedge-tailed Eagle (Tasmanian) [64435]	Endangered	Species or species habitat may occur within area

Name	Status	Type of Presence
<a href="#">Botaurus poiciloptilus</a> Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
<a href="#">Ceyx azureus diemenensis</a> Tasmanian Azure Kingfisher [25977]	Endangered	Species or species habitat may occur within area
<a href="#">Lathamus discolor</a> Swift Parrot [744]	Endangered	Species or species habitat may occur within area
<a href="#">Tyto novaehollandiae castanops</a> Masked Owl (Tasmanian) [67051]	Vulnerable	Breeding known to occur within area
<b>FISH</b>		
<a href="#">Prototroctes maraena</a> Australian Grayling [26179]	Vulnerable	Species or species habitat may occur within area
<b>FROGS</b>		
<a href="#">Litoria raniformis</a> Growling Grass Frog, Southern Bell Frog, Green and Golden Frog, Warty Swamp Frog [1828]	Vulnerable	Species or species habitat likely to occur within area
<b>MAMMALS</b>		
<a href="#">Dasyurus maculatus maculatus (Tasmanian population)</a> Spotted-tail Quoll, Spot-tailed Quoll, Tiger Quoll (Tasmanian population) [75183]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Perameles gunnii gunnii</a> Eastern Barred Bandicoot (Tasmania) [66651]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Sarcophilus harrisii</a> Tasmanian Devil [299]	Endangered	Species or species habitat likely to occur within area
<b>PLANTS</b>		
<a href="#">Caladenia caudata</a> Tailed Spider-orchid [17067]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Callitris oblonga subsp. oblonga</a> [64864]	Endangered	Species or species habitat likely to occur within area
<a href="#">Carex tasmanica</a> Curly Sedge [9101]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Epacris exserta</a> South Esk Heath [19879]	Endangered	Species or species habitat known to occur within area
<a href="#">Glycine latrobeana</a> Clover Glycine, Purple Clover [13910]	Vulnerable	Species or species habitat likely to occur within area
<a href="#">Prasophyllum apoxichilum</a> Tapered Leek-orchid [64947]	Endangered	Species or species habitat may occur within area
<a href="#">Pterostylis commutata</a> Midland Greenhood [64535]	Critically Endangered	Species or species habitat may occur within area
<b>Migratory Species</b>	<a href="#">[ Resource Information ]</a>	
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Migratory Marine Birds		

Name	Threatened	Type of Presence
<a href="#"><u><i>Apus pacificus</i></u></a>		
Fork-tailed Swift [678]		Species or species habitat may occur within area
<a href="#"><u><i>Ardea alba</i></u></a>		Species or species habitat may occur within area
Great Egret, White Egret [59541]		Species or species habitat may occur within area
<a href="#"><u><i>Ardea ibis</i></u></a>		Species or species habitat may occur within area
Cattle Egret [59542]		Species or species habitat may occur within area
<b>Migratory Terrestrial Species</b>		
<a href="#"><u><i>Haliaeetus leucogaster</i></u></a>		Species or species habitat likely to occur within area
White-bellied Sea-Eagle [943]		Species or species habitat likely to occur within area
<a href="#"><u><i>Hirundapus caudacutus</i></u></a>		Species or species habitat may occur within area
White-throated Needletail [682]		Species or species habitat may occur within area
<a href="#"><u><i>Myiagra cyanoleuca</i></u></a>		Breeding likely to occur within area
Satin Flycatcher [612]		Breeding likely to occur within area
<b>Migratory Wetlands Species</b>		
<a href="#"><u><i>Ardea alba</i></u></a>		Species or species habitat may occur within area
Great Egret, White Egret [59541]		Species or species habitat may occur within area
<a href="#"><u><i>Ardea ibis</i></u></a>		Species or species habitat may occur within area
Cattle Egret [59542]		Species or species habitat may occur within area
<a href="#"><u><i>Gallinago hardwickii</i></u></a>		Species or species habitat may occur within area
Latham's Snipe, Japanese Snipe [863]		Species or species habitat may occur within area

## Other Matters Protected by the EPBC Act

Listed Marine Species	[ Resource Information ]	
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.

## Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World Heritage and Register of National Estate properties, Wetlands of International Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

For species where the distributions are well known, maps are digitised from sources such as recovery plans and detailed habitat studies. Where appropriate, core breeding, foraging and roosting areas are indicated under 'type of presence'. For species whose distributions are less well known, point locations are collated from government wildlife authorities, museums, and non-government organisations; bioclimatic distribution models are generated and these validated by experts. In some cases, the distribution maps are based solely on expert knowledge.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

## Acknowledgements
